"The real voyage of discovery consists not in seeking new landscapes, but in having **new eyes.**" — Marcel Proust

We can not separate life from living matter, in order to study only living matter and its reactions. Inevitably, **studying living matter and its reactions, we study life itself**, *The Nature of Life*, Academic press, 1948 Albert Szent-Györgyi

The spark of life is electricity?

When Albert Szent-Györgyi, the 1937 winner of the Nobel Prize in Medicine was asked whether he thought that being alive could be defined solely as a **biochemical state**, his answer was no, **absolutely no**".

Healing is mostly Charge transfer

Chronic Disease = Electronegative

- The injured area must stay electropositive for healing to occur. Everything needed to heal is electronegative and the charge is necessary to attract the healing items.
- If the injured area becomes electronegative, healing stops. Negative repels negative and the things needed to heal are repelled.
- Chronic disease is electronegative (cancer is very electronegative).
- Healing occurs when the injured area is switched back to electropositive.

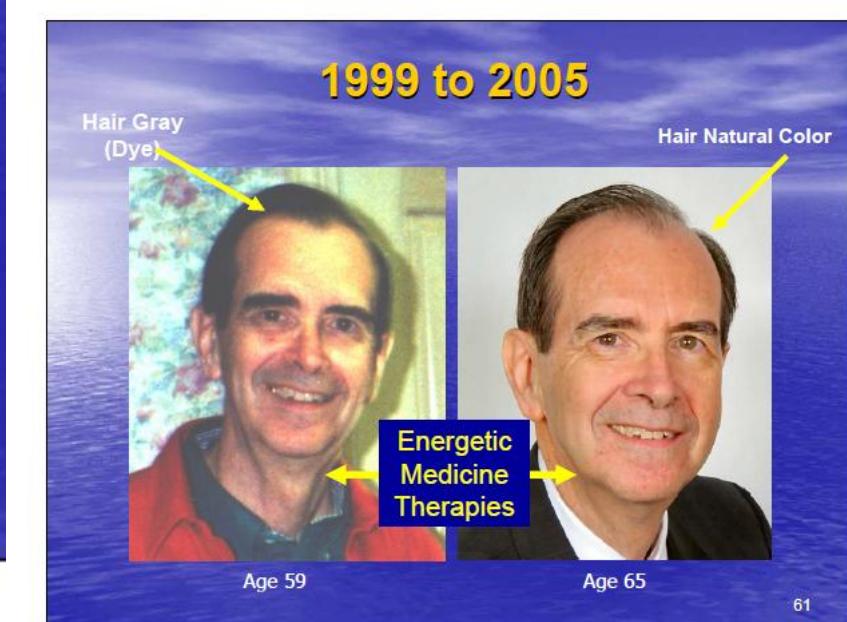

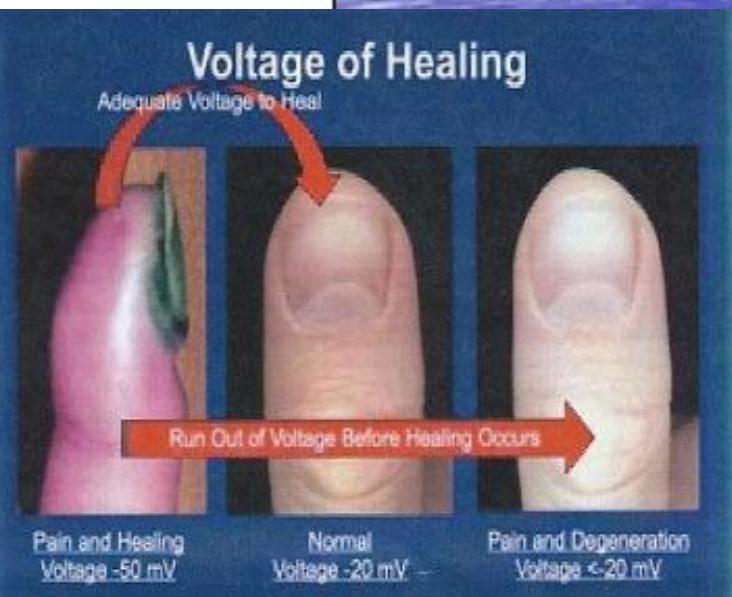

Healing is Voltage

Jerry Tennant, M.D.

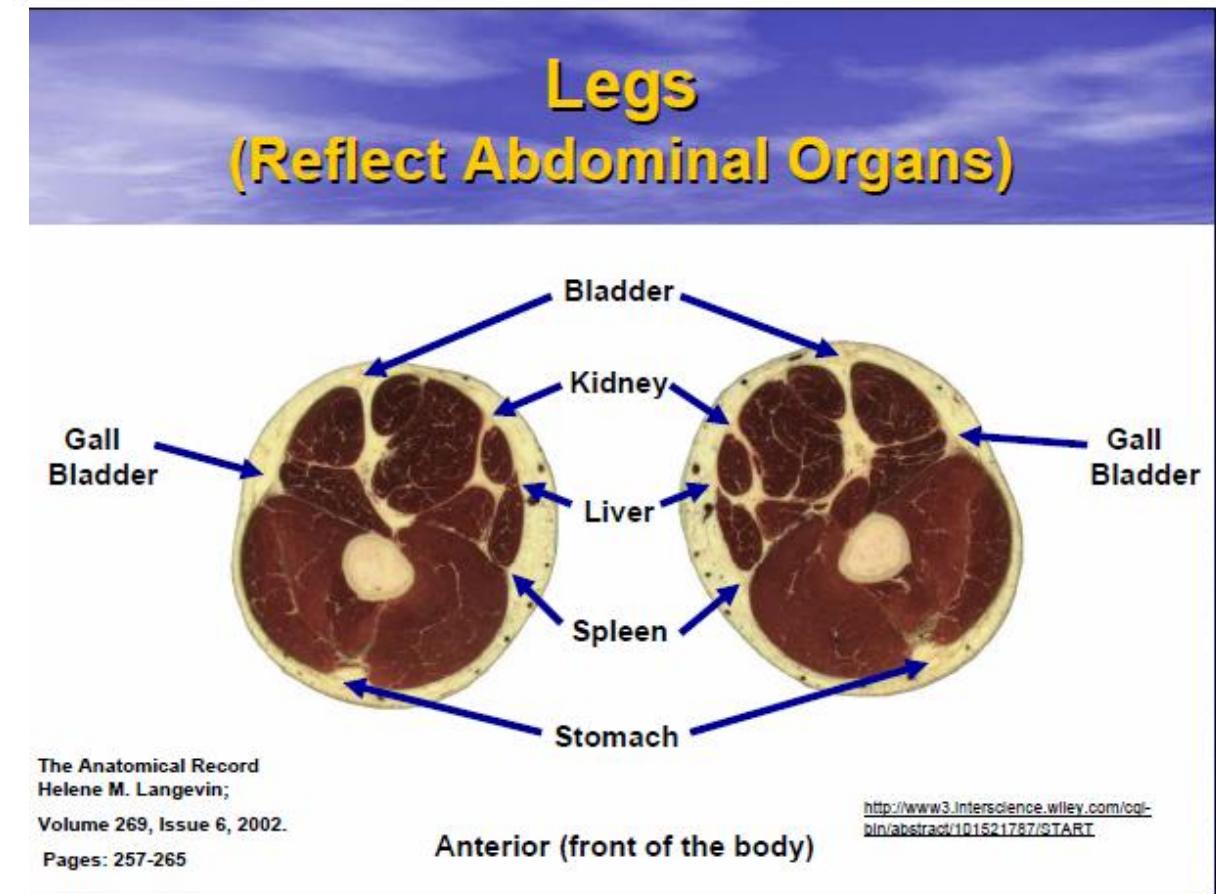

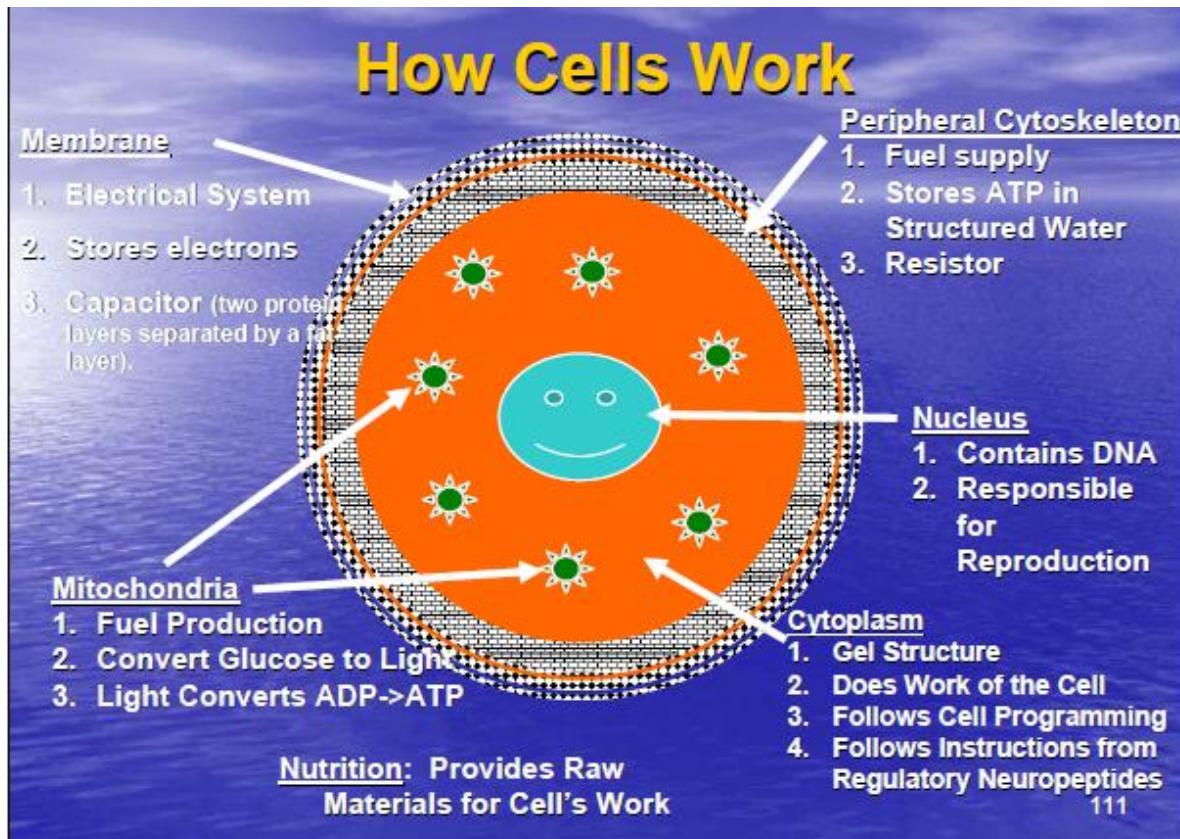

Healing is Energetic Medicine

- Healing always requires the restoration of the power supply to the cells/organs.
- The restoration of power to cells/organs is called Energetic Medicine.

electrophysiology y electrophysiopathology

ELECTROMORFOLOGY & ELECTROPHYSIOLOGY MACRO & MICRO

an äusseren Fällen gezeigt, dass und wie sich das oxydoreduktive Verhalten des Blutes bei vegetativen Störungen ändert, und die Befunde auch klinisch verwertet.

Die Serumjodometrie (PISCHINGER, 1961, 1965) weist in die gleiche Richtung. Denn die Jodverbrauchswerte werden nicht nur mit Stärke als Indikator, sondern genauer noch mit *Elektrotitration* (KELLNER, G. und Fr. KLENKHART, 1970) gewonnen. Weiter haben H. J. BUSCH und L. BUSCH durch ausgedehnte genaue elektrische Potential- und Widerstandsmessungen an der Haut und an Geweben nachgewiesen, daß den Regulationen primär ein „vermaschtes Zelle-Elektrolyt-System“ in der Peripherie zugrunde liegt. Wenn schließlich HAUSS und JUNGE-HÜLSING bei der „unspezifischen Mesenchymreaktion“ (1964) finden, daß in den Mukopolysacchariden nach verschiedensten Einflüssen auf den Organismus stets nur entweder vermehrt oder vermindert Sulfationen eingebaut werden, so muß sich dieser Vorgang letztlich wiederum im elektrischen *Potential* und den damit verbundenen Folgen auswirken: Wasserhaushalt, Oberflächen- und Grenzflächenaktivität. Denn erhöhter *Sulfatgehalt* gibt erhöhte *negative Ladung* und umgekehrt.

Auch mit histophysiko-chemischen Methoden kann die elektrische Aktivität im Gewebe nachgewiesen werden. Nach der bekannten Me-

Sulfate is Vastly Underappreciated!

- Sulfate is the 4th most abundant anion in the blood and protects it from coagulating
- Detoxifies drugs, food additives, and environmental toxins like aluminum and mercury
- Essential component of extracellular matrix proteins throughout the tissues
- Cerebroside sulfate is a major constituent of myelin sheaths surrounding axons in neurons

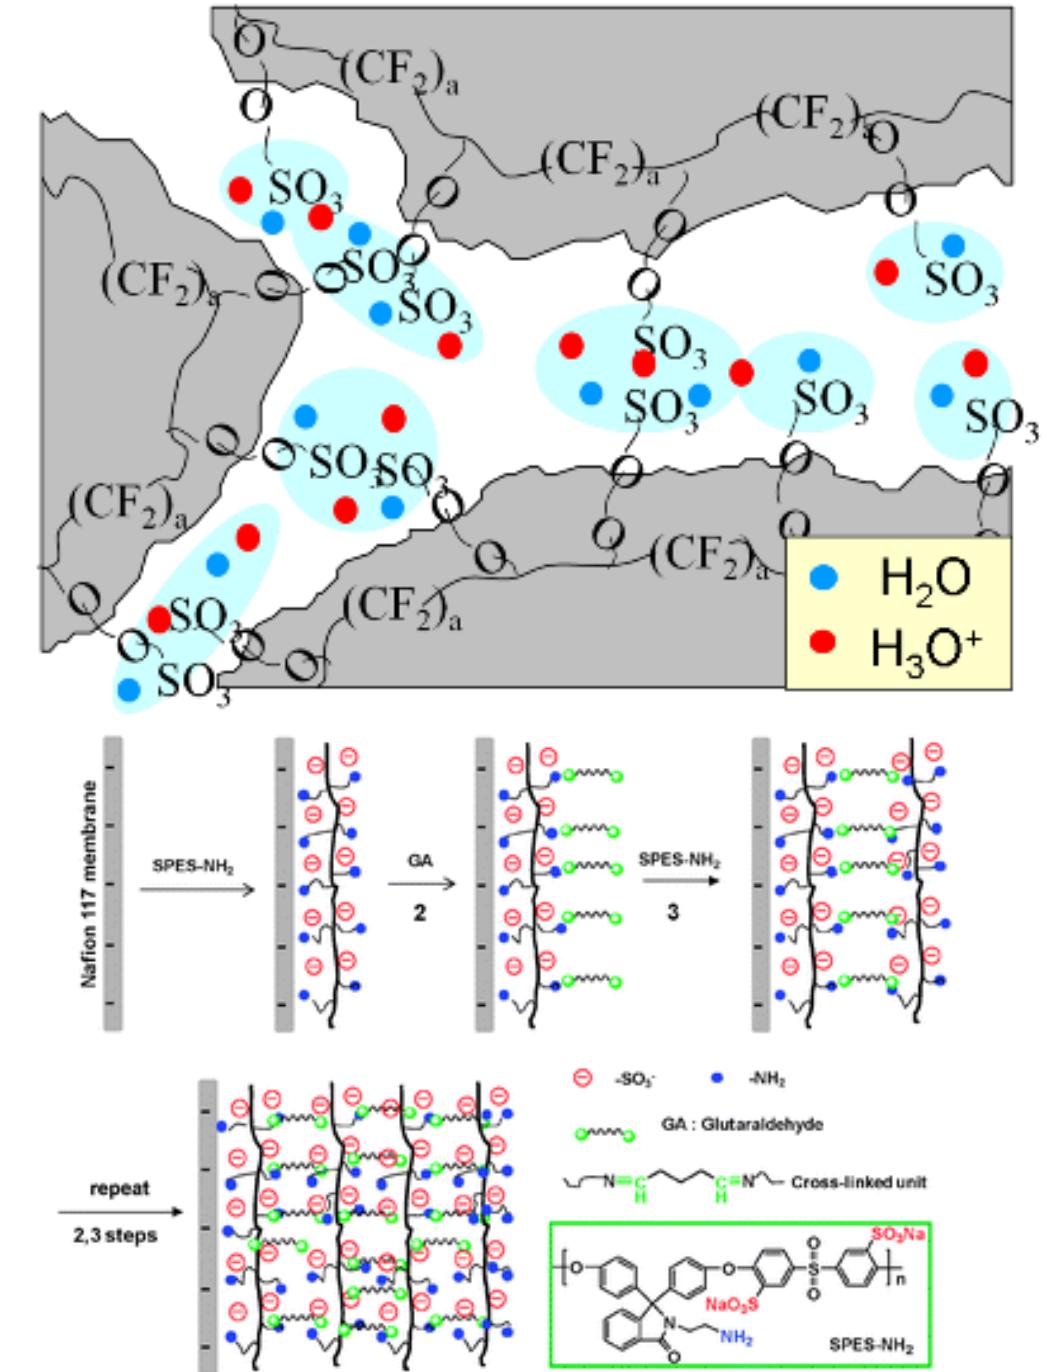

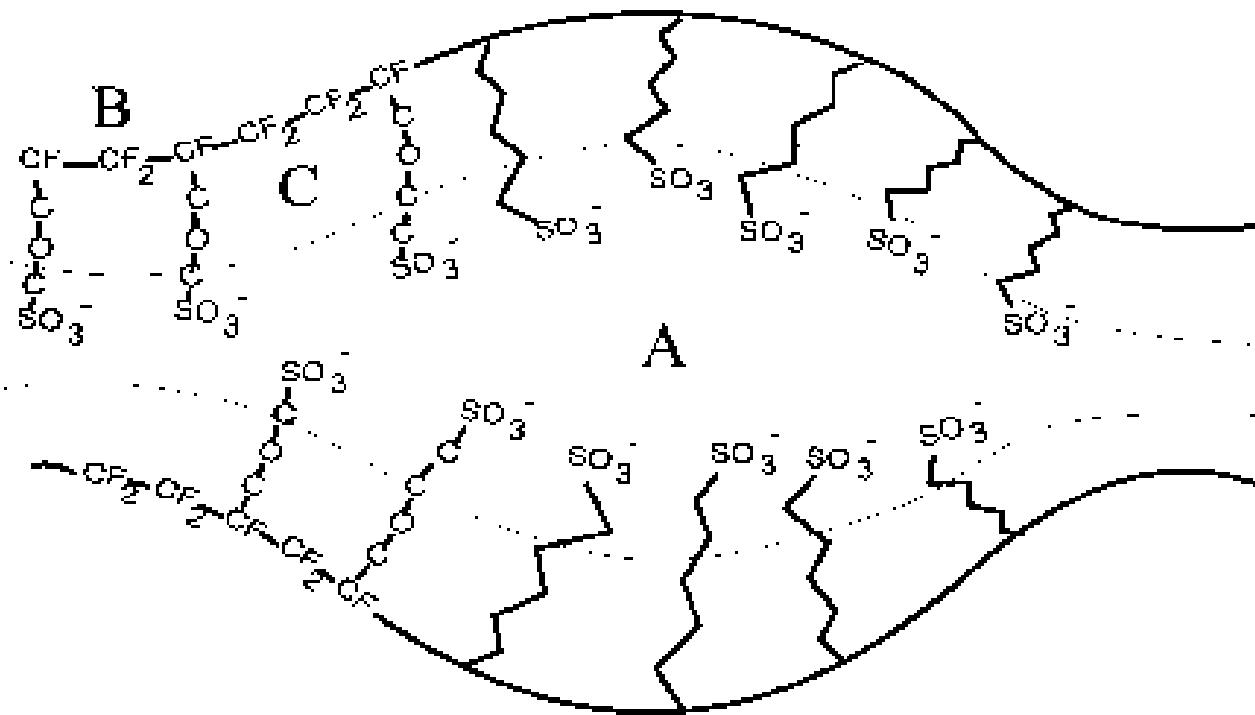

SULFUR STRUCTURAL & FUNCTIONAL

- GAG'S (ANIONIC RESERVE) PROTONIC BUFFER
- PUENTES DISULFURO ENZIMAS , (quaternary structure)
- INMUNOGLOBULINAS, (quaternary structure)
- SULFATION DETOX, P450, OTHER DETOX WAYS SULFUR DEPENDANT
- COLESTEROL SULFATO, (NEGATIVE CHARGE)
- DHEA SULFATO, (NEGATIVE CHARGE)
- GLUCOCALIX, SULFATADO (NEGATIVE CHARGE)
- HEPARINA (NEGATIVE CHARGE)

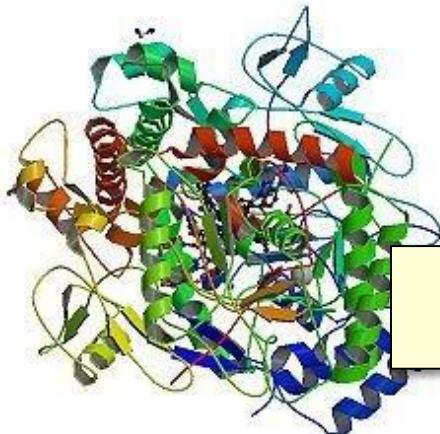

Nafion, Sulfated

- matrix like

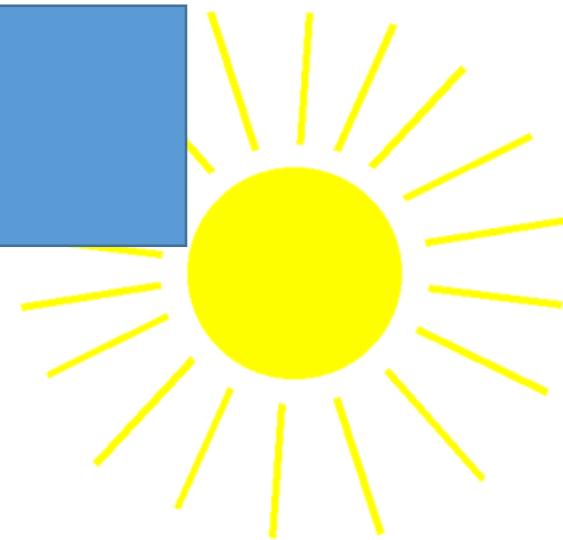

A Provocative Proposal

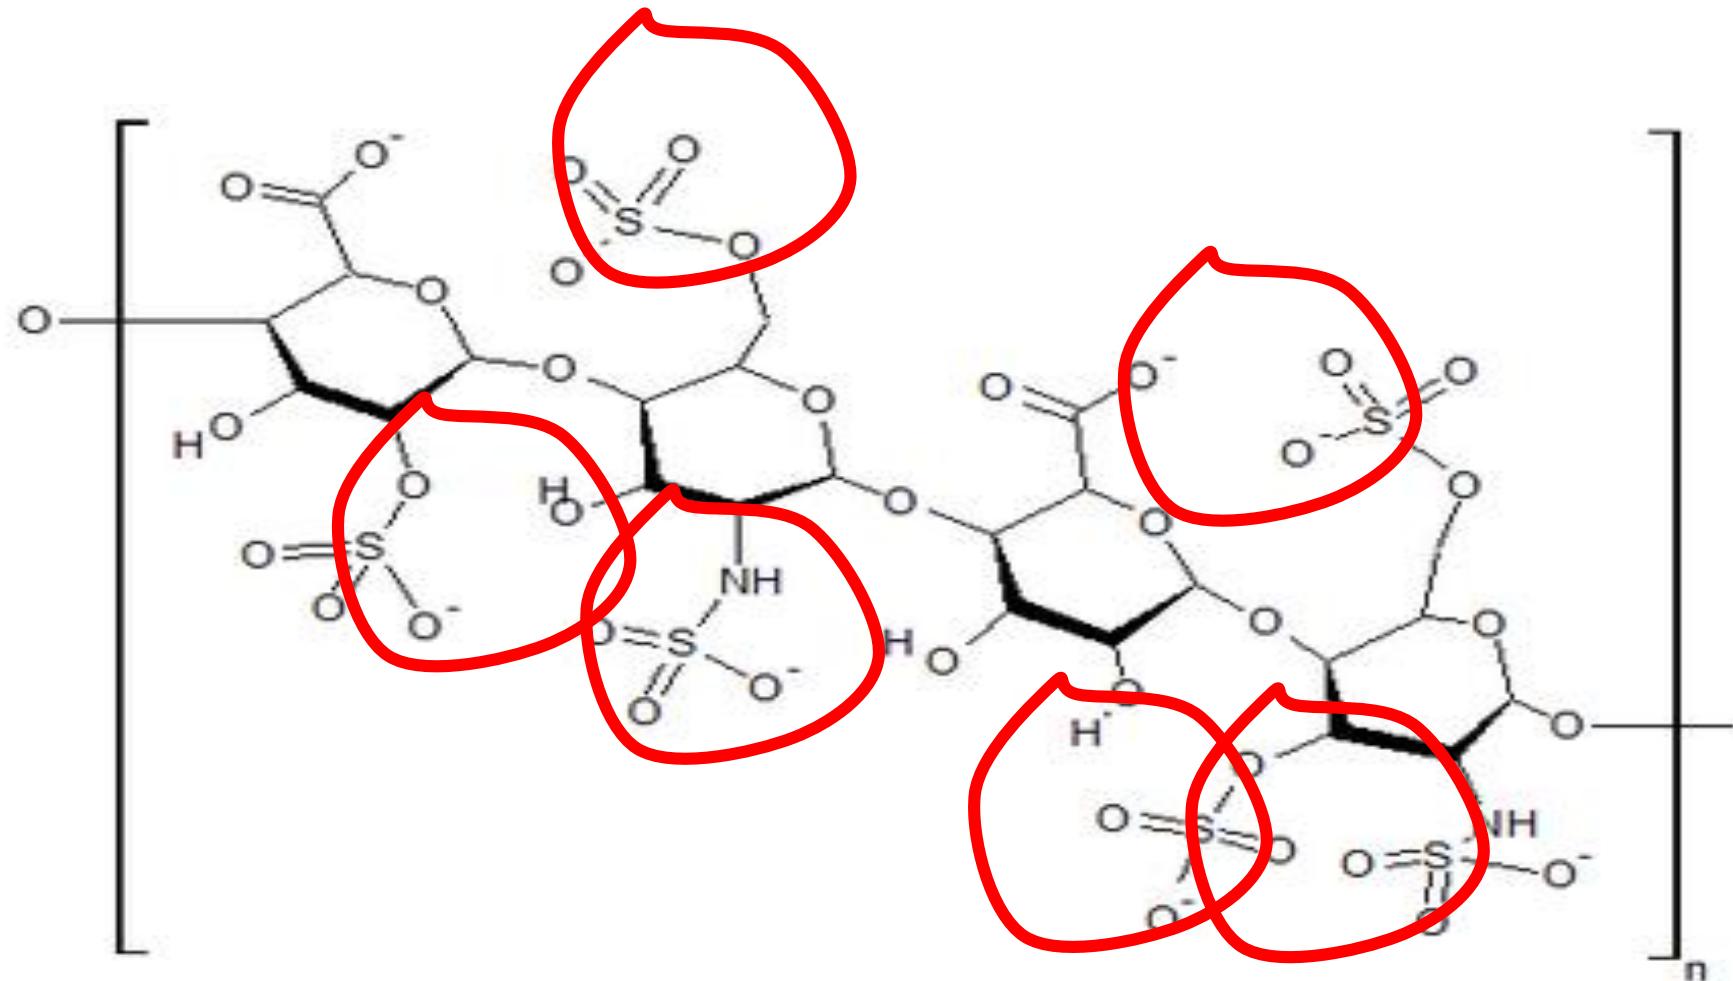

- Cholesterol sulfate supplies oxygen, sulfur, cholesterol, energy and negative charge to all the tissues
- Sulfate is synthesized from sulfide in skin and blood stream utilizing energy in sunlight
 - Protects from UV damage and keeps microbes out
- Endothelial Nitric Oxide Synthase (eNOS) performs the magic

The skin is a solar powered battery!

Heparan Sulfate: Wonder Worker

Polymers of sugars with attached sulfates: safe glucose storage

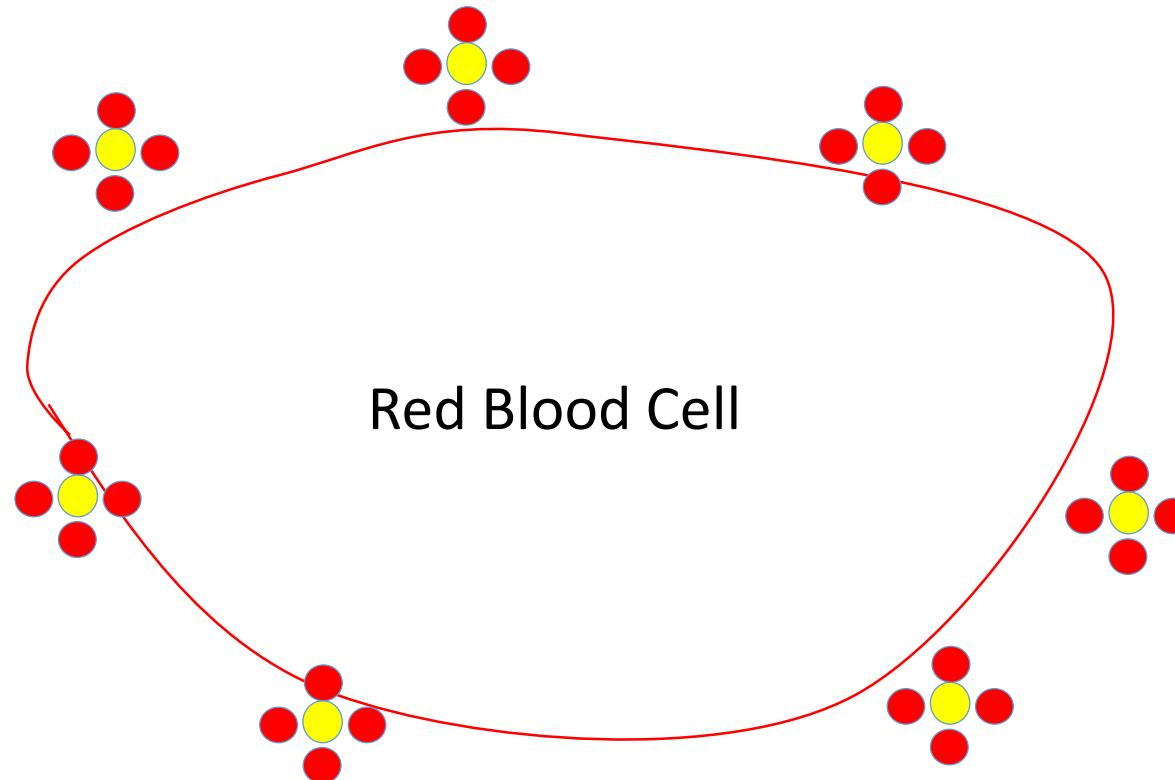

The Glycocalyx

- Negatively charged gel-like mesh lining the walls of all arteries, veins and capillaries
- Depends crucially on sulfated polysaccharides
 - Particularly heparan sulfate proteoglycans (HSPGs)
- Sulfate creates “exclusion zones”
 - Helps protect cells in wall from ion leaks and contact with enzymes suspended in blood
 - Greatly reduces amount of flowing blood (decreases resistance, lowers blood pressure)
 - Stores energy in “battery” constructed from structured water

Key Role for Sulfates

- Sulfates decorate exterior of cell, e.g., as heparan sulfate proteoglycans (HSPGs) or as cholesterol sulfate (Ch-S)
- Sulfates carry negative charge and keep cells from sticking together
- Sulfates, as kosmotropes, create exclusion zone – gel-like environment to protect cell

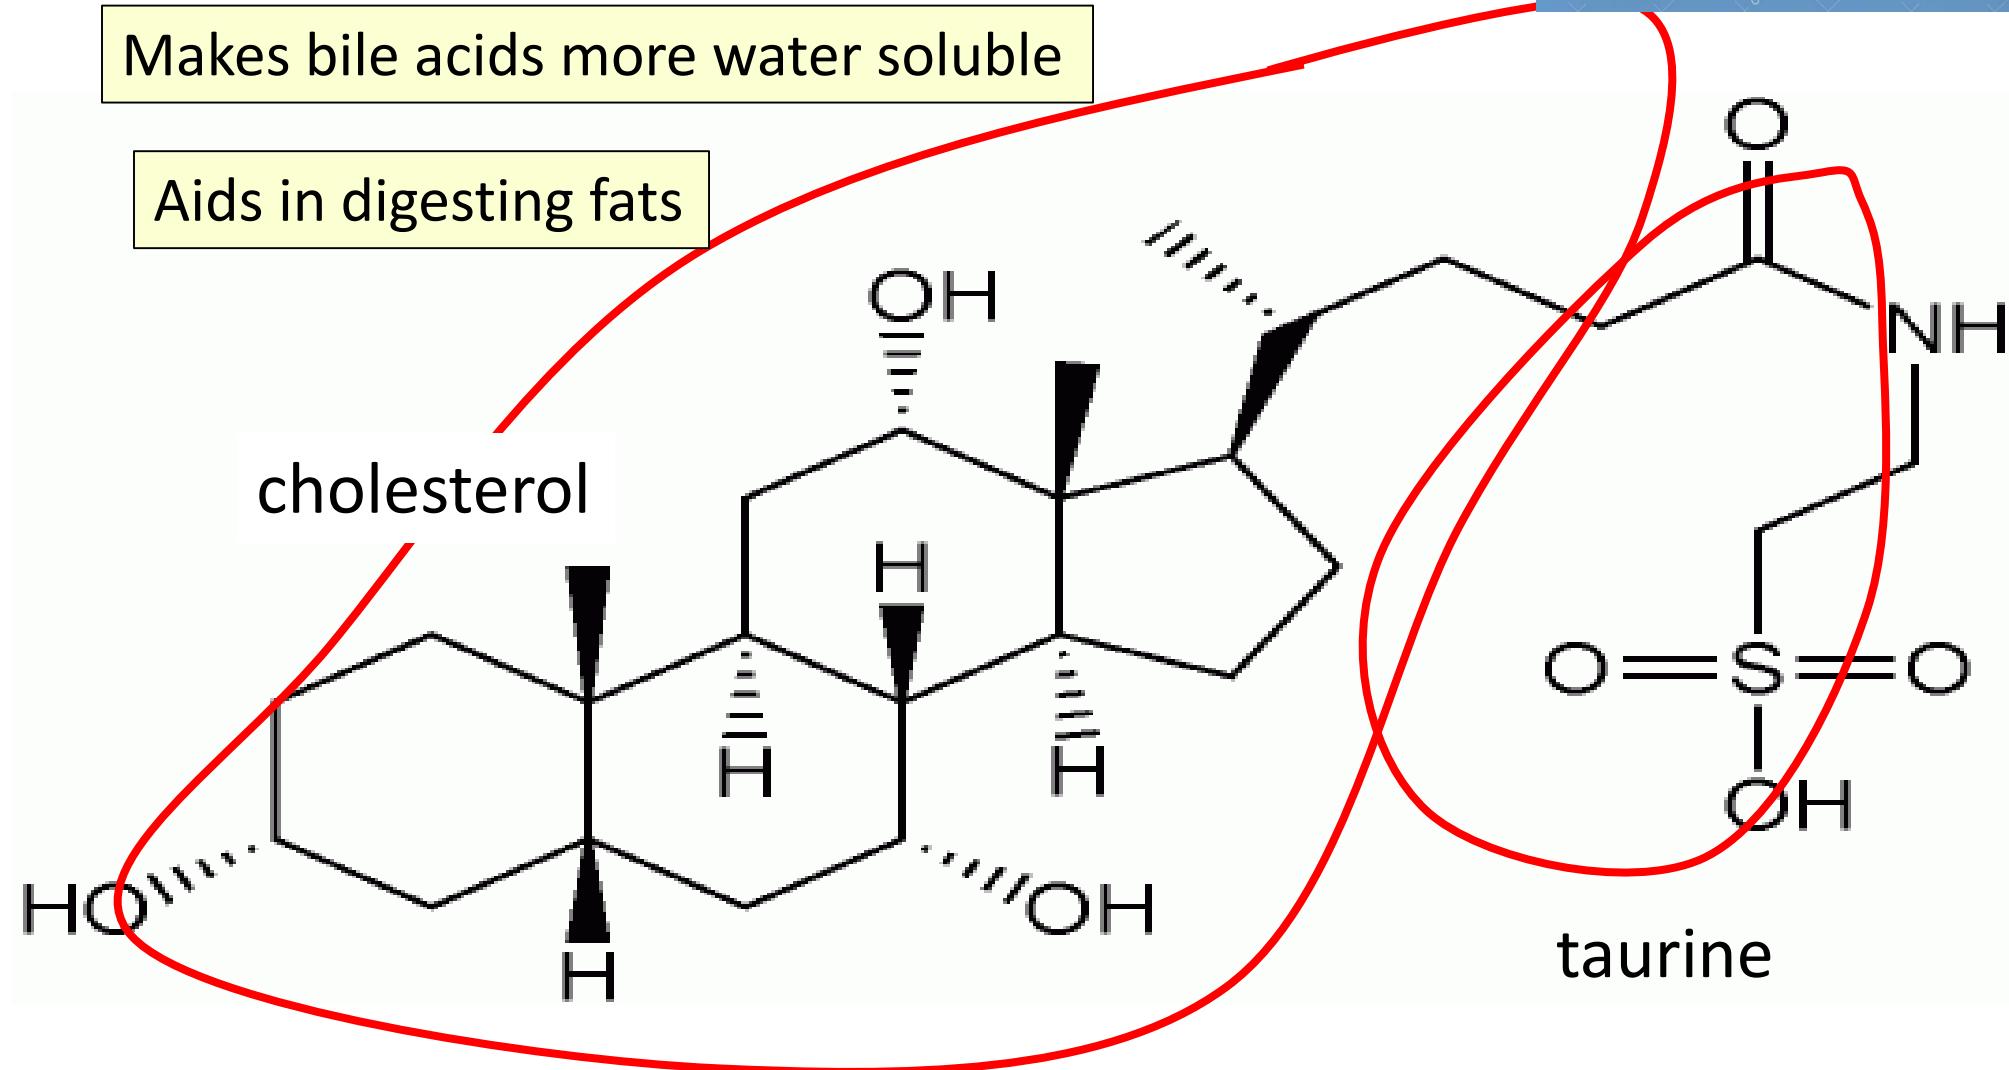

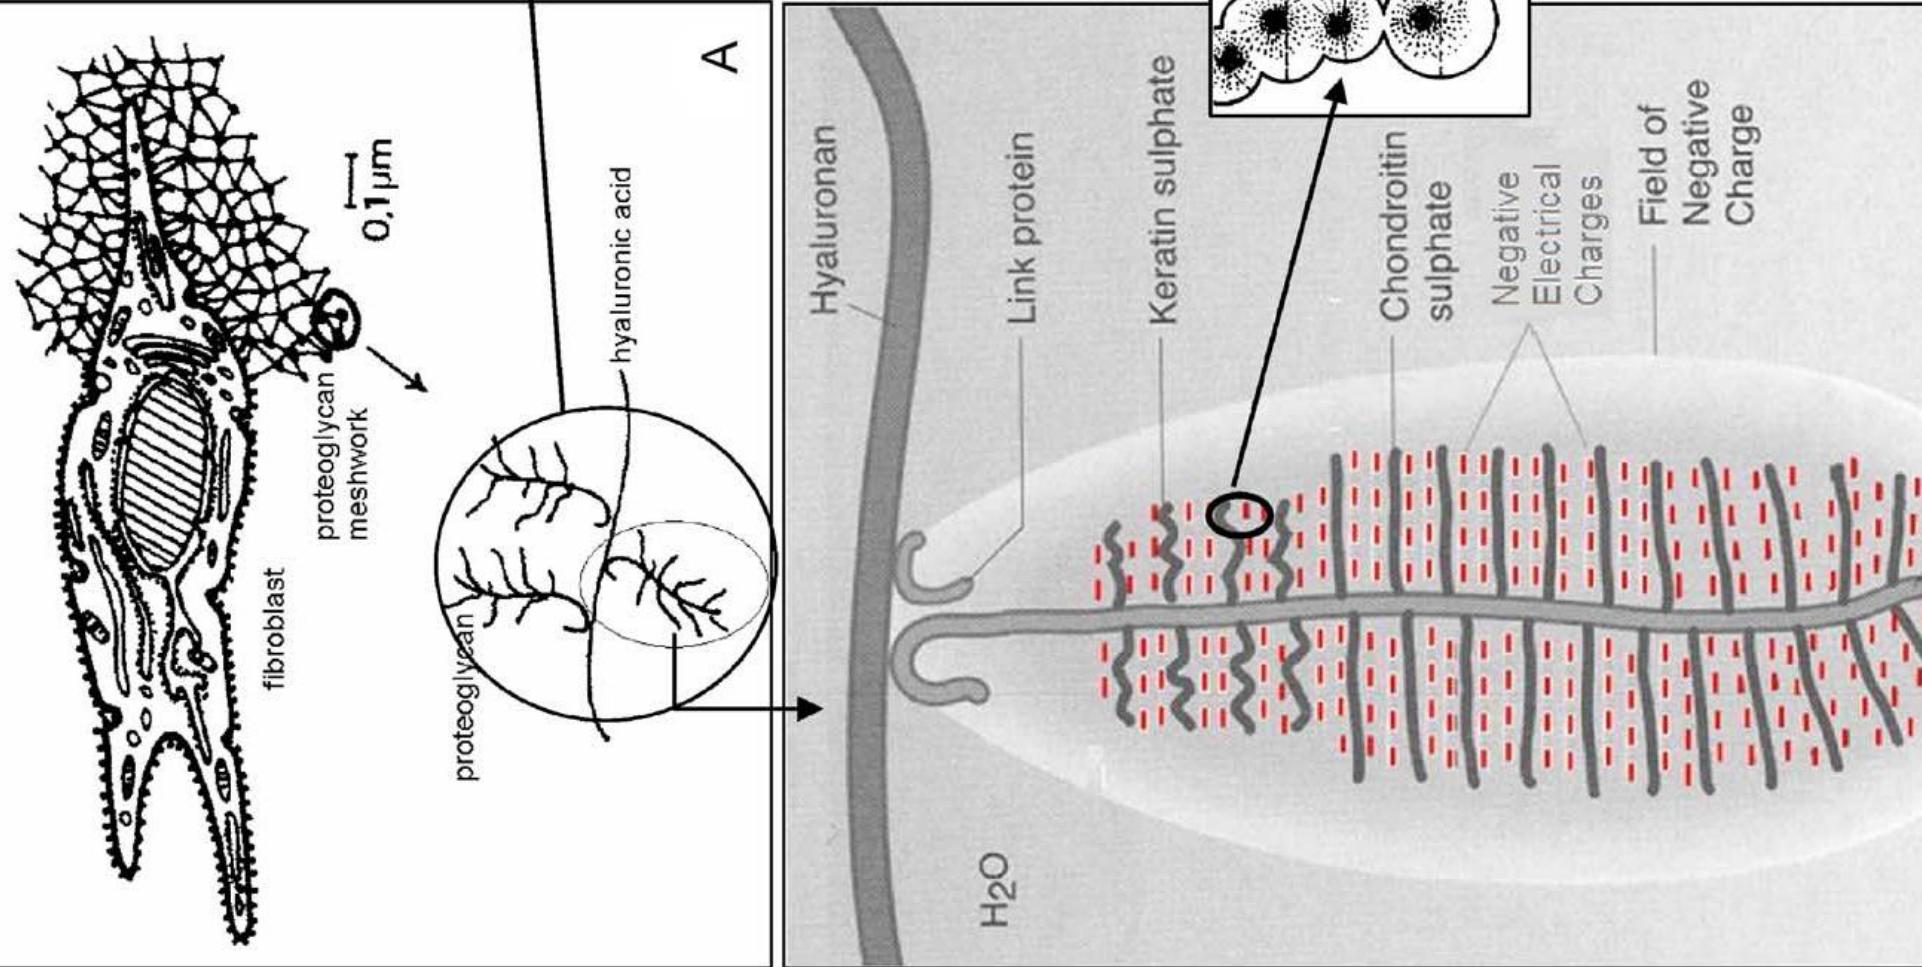

Taurocholic Acid: in Bile Acids

Makes bile acids more water soluble

Aids in digesting fats

MATRISOME SULFATED NEGATIVE CHARGE

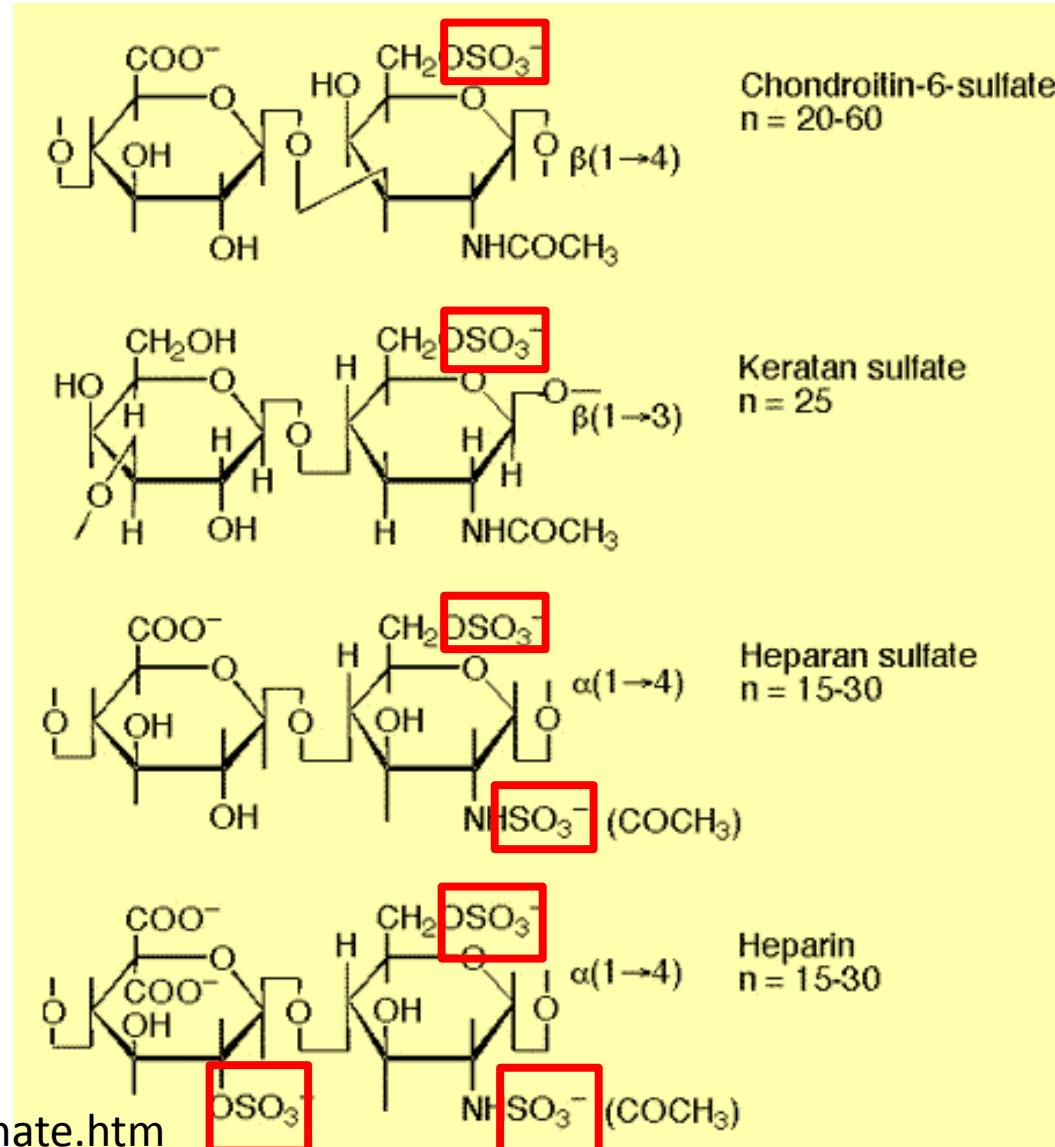

SO₄

Sulfated Glycosaminoglycans (GAGs)

- Prominent in extracellular matrix of *all cells*
- Amount of sulfate depends on availability
- Crucial for maintaining negative charge and protecting from infection

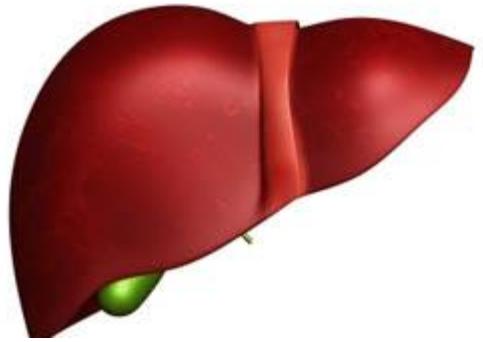

GAG'S

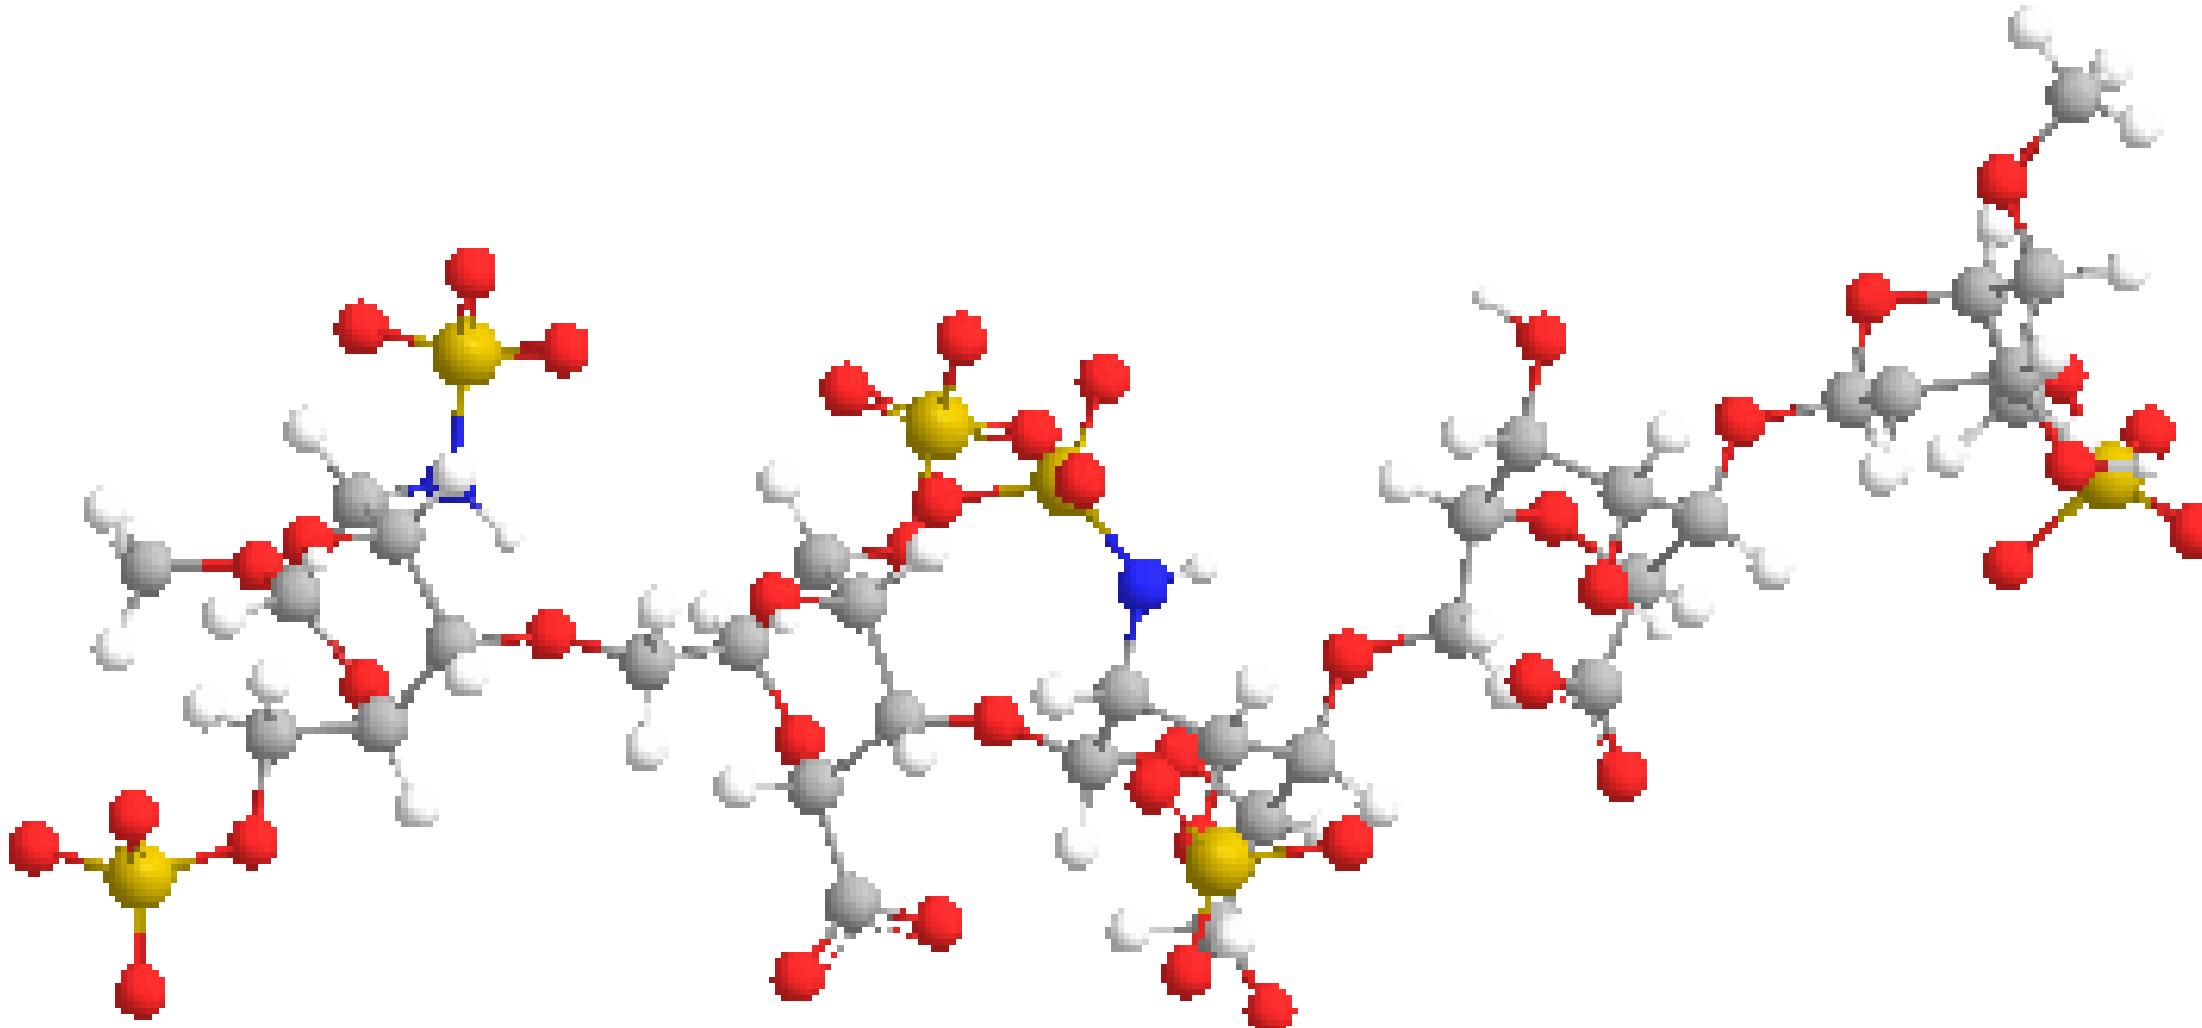

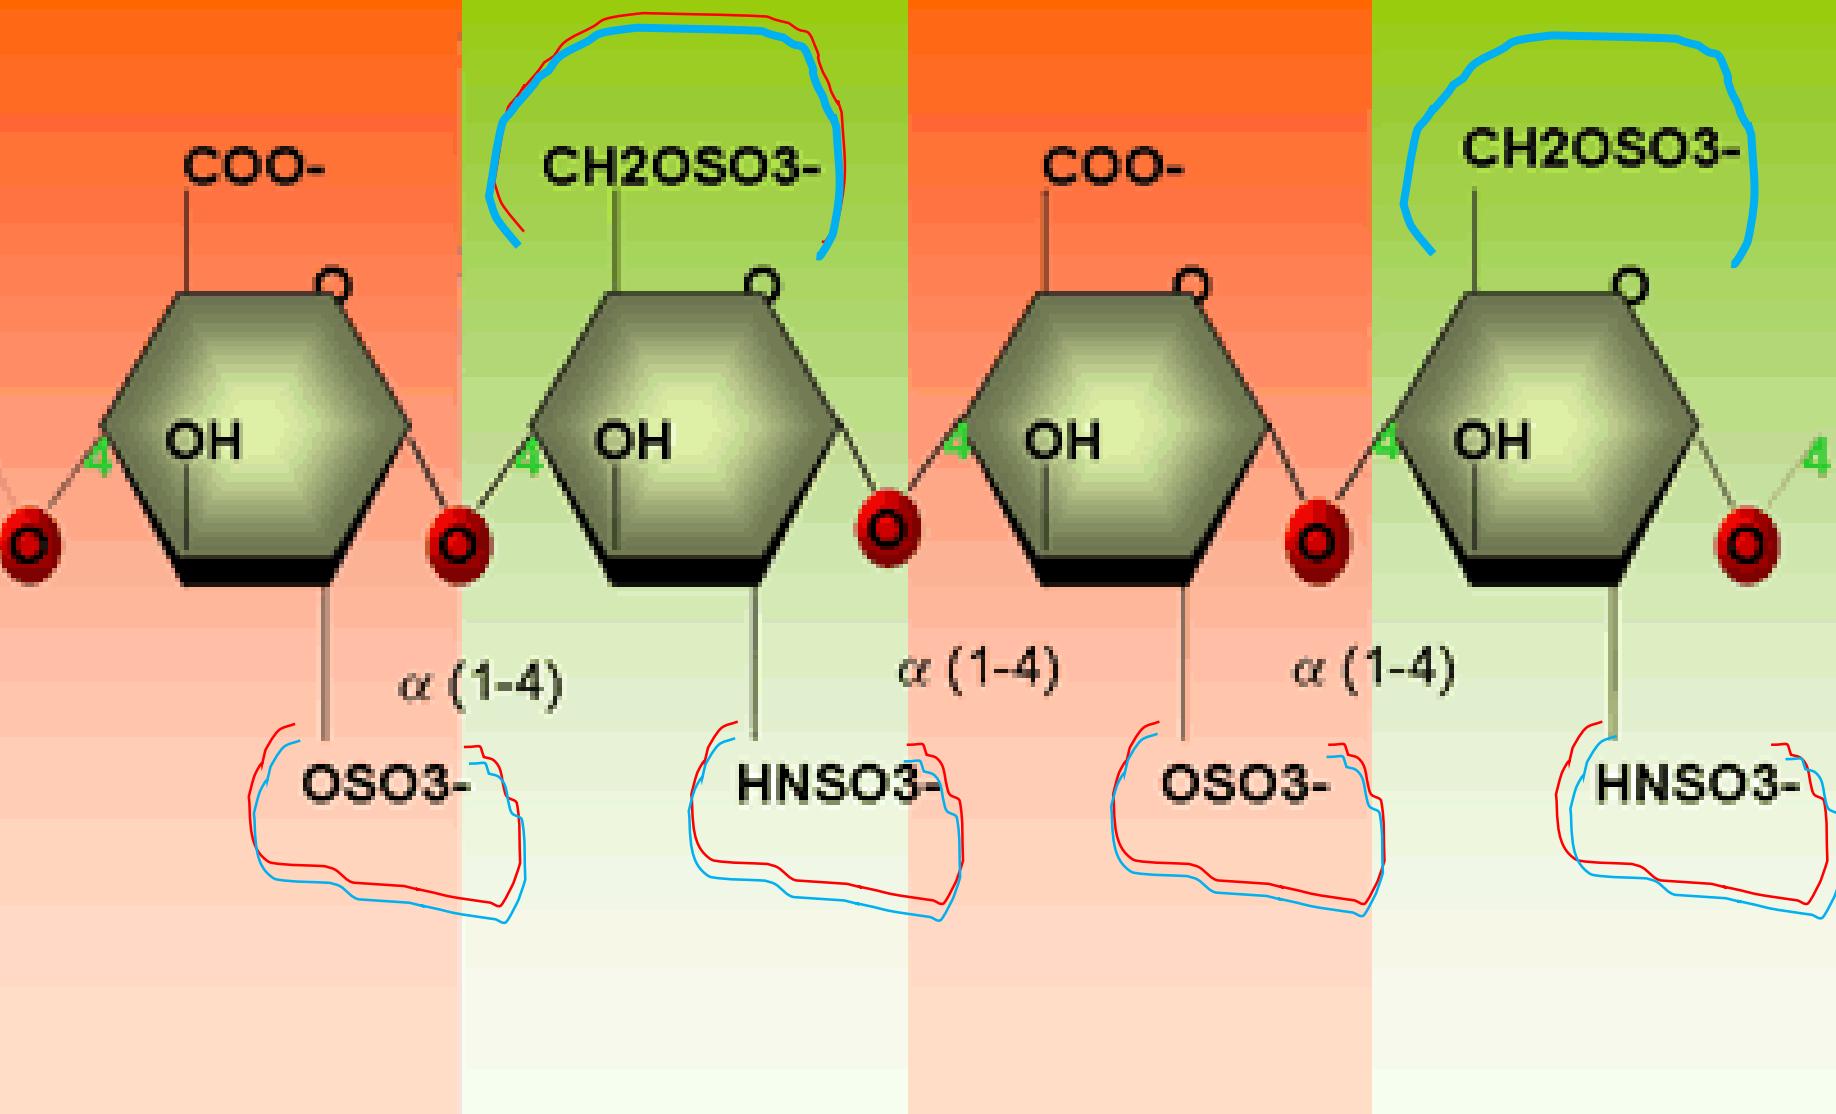

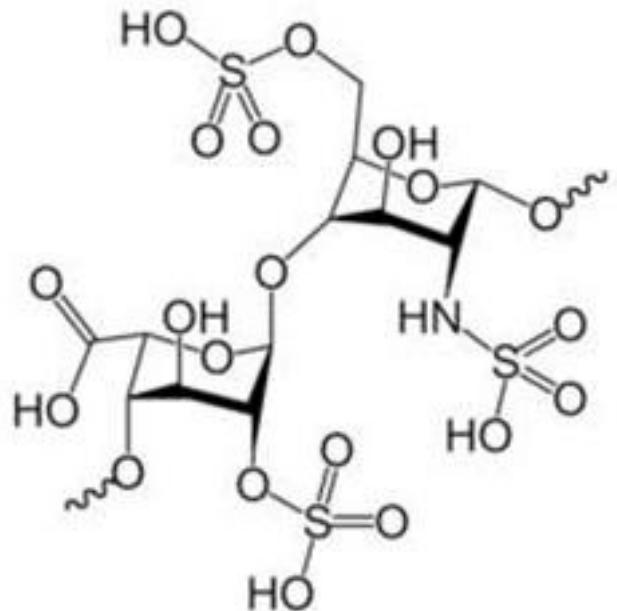

- Examples of glycosaminoglycans include chondroitin **sulfate**, dermatan **sulfate**, heparin, heparin **sulfate** and keratin **sulfate**.
- repel each other to form an arrangement like the bristles of a brush.
- The result of the charge density is a strong field or “domain” of negative charge (Hay, 1981a, b).

BIOIDENTICAL

PATENTABLE

INDUSTRY'S PETRY DISH

Common Ways Electrons are Given to the Human Body

- Alkaline water
- Uncooked food
- Touching the earth
- Sunshine
- Moving water
- Touching another living thing (e.g., people, pets, trees, plants)

Common Ways Electrons are Taken from the Human Body

- **Healers/doctors** who touch their patients lose electrons to patient.
- **Hugs:** transfers electrons from one person to another.
- **Parent holding sick child:** child gets well quicker and parent left tired.
- **Moving air:** wind, air conditioning, fans, convertibles, hair dryers.

Common Ways Electrons are Given to the Human Body

- **Hugs**: electrons transferred from one body to another by the acupuncture meridians.
- **Reflexology**: like hugs only transmitted from hands to acupuncture points.
- **Acupuncture**: needle transfers electrons from therapist and/or air to meridians.
- **Moxibustion**: burning material around acupuncture needle transfers both electrons and infrared light.

Common Ways Electrons are Taken From the Human Body

- Acidic water (tap water, chlorinated water, fluoride, most bottled water)
- Carbonated beverages
- Caffeinated beverages (pop, coffee, tea)
- Alcoholic beverages
- Cooked food
- Processed food

*“Water is life’s
mater and matrix,
mother and medium.*

There is no life without water”

Albert Szent-Gyorgyi

A large whale, likely a humpback, is shown swimming gracefully in the deep blue ocean. The whale's body is angled downwards and to the right, with its long, patterned pectoral fin visible on the left. The water around it is a vibrant turquoise color, creating a sense of depth and tranquility.

PLEASE BLESS US
WITH YOUR
SINGING

“La célula vive como un pez en su acuario. Su calidad de vida depende de la pureza del agua en la que nada y de los alimentos que encuentra en ella..”

Heal one Cell

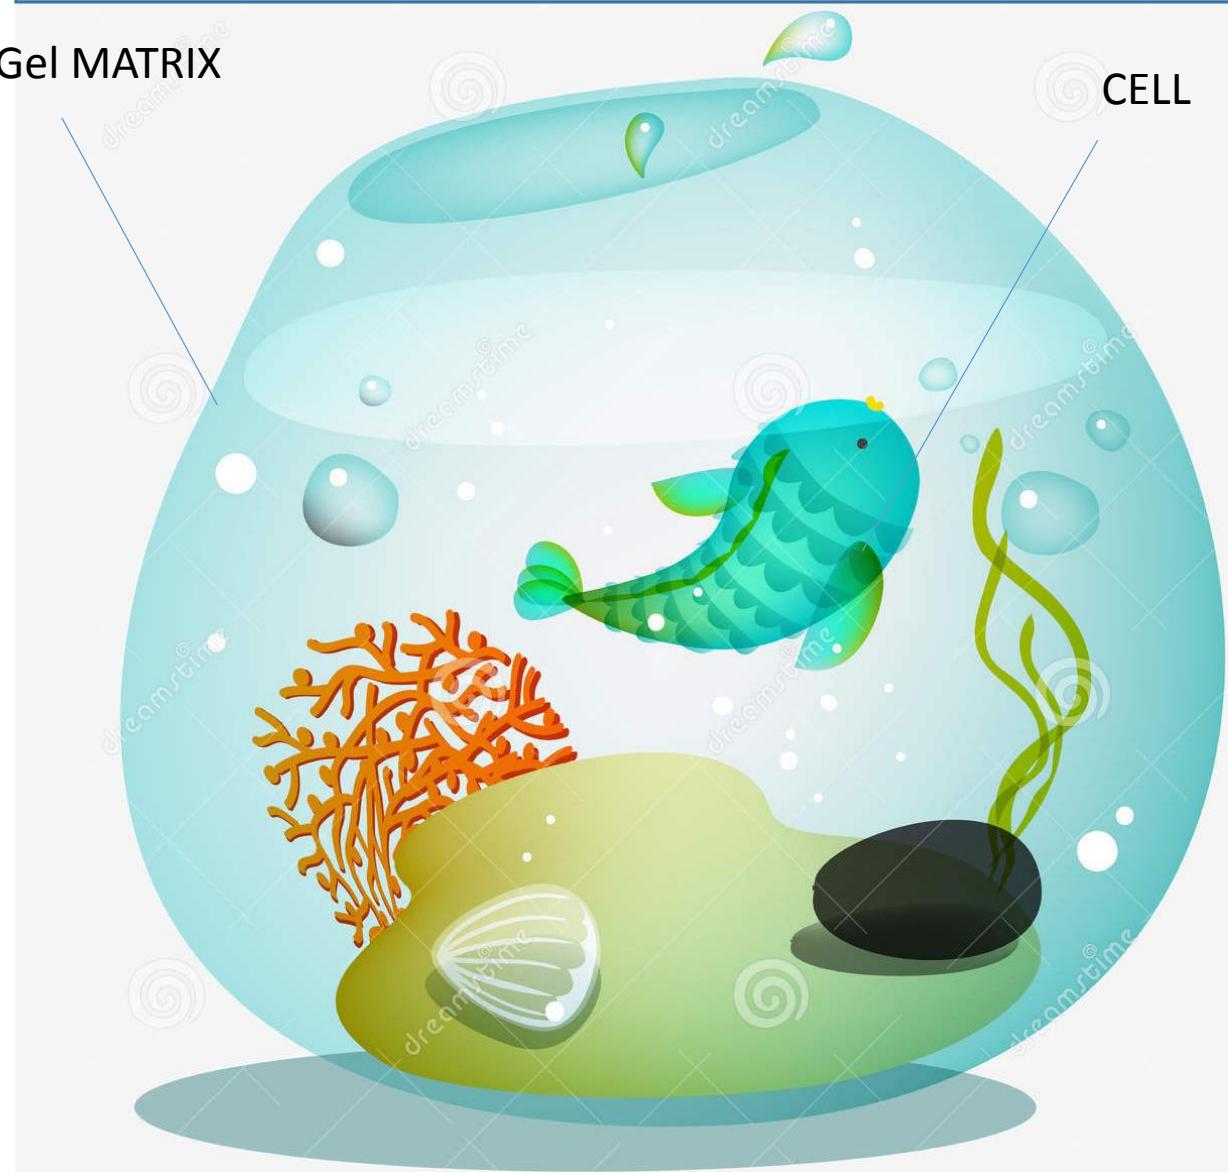

what a Cell needs

1. Water with charge, («buffer,alkalizing» water)
2. Minerals, cofactors (on off switches) and ph regulation, osm
3. Oxigen, alkalinity is needed to retain O₂ (niehls Bohr)
4. Sunshine, EZ water, capilar flow, vit D, sulfation
5. Fats to make cell membranes and hormones
6. Aminoacids to make enzymes and structures
7. Oligoelements, cofactors
8. Vitamins,
9. Voltage correlates to ph: 7.2 is – 22mV
10. conductance, fluidity, “cleanness”

- protein synthesis,
- oxidation reactions,
- actin–myosin interactions,
- universal buffer?

The cells of living tissue are electrical direct cur-rent (DC) systems

All life generates an electrical DC charge

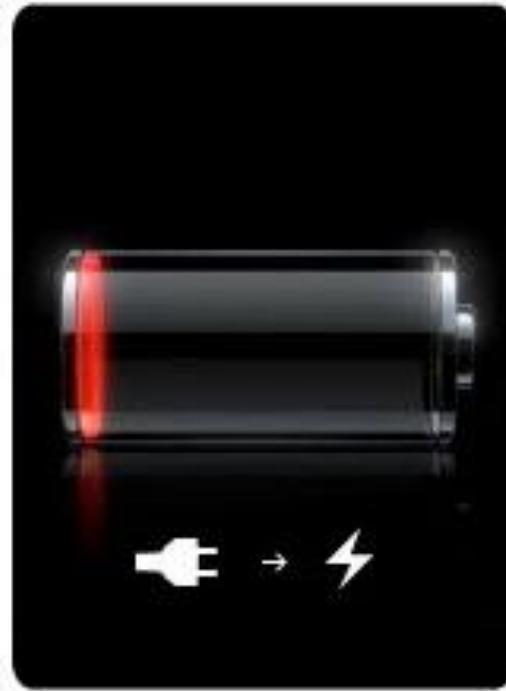

This natural DC charge is created by the movement of ions in and out of cell membranes which are responsible for a healthy cell membrane's electrical charge of approximately – 70 mV.

Any challenge to the cell, such as oxy-gen/nutrient deficiency, toxicity, tissue changes or inflammation, alters ion movement and the charge on the cell membrane changes.

This altered charge profoundly affects the homeostasis of the cell and normal metabolic processes, including the movement of nutrients into, and waste products of metabolism out of the cell.

~ Martin Milner, ND

CRONIC FATIGUE LOW BATT?

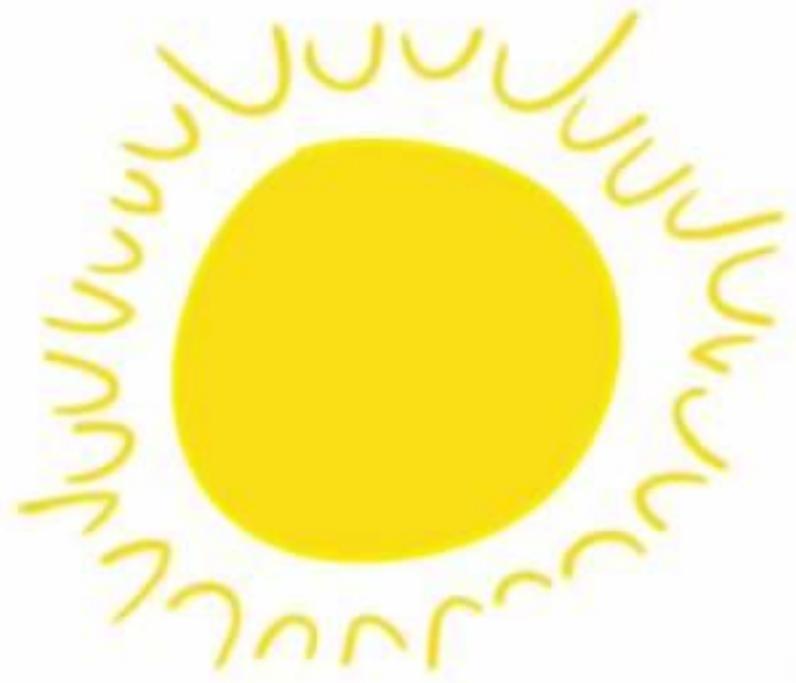

ALKALI METALS
ALKALI EARTH METALS

ELECTRO LYTE

nunca tocar la tierra.

The Body grounds to the earth...
The cell grounds to the living matrix (cellular grounding)

Electrons – An Overlooked Key Nutrient

All physical things are comprised of atoms. An atom consists of a central nucleus which is positively charged, and electrons which are negatively charged in shells or orbits around that central nucleus.

Atoms combine with one another because of their desire to lose, gain, or share electrons.

The phenomenon of electrons from one atom being shared with another atom is essential for construction of the complex biochemical compounds, organelles, cells, tissues, and organs comprising life.

The release of energy as electrons move from one energy level to another is responsible for the energy required in all body processes.

Modern living has created an electron-deficient environment that is creating electron-deficient bodies. Electron Deficiency is another way of saying something is Acidic.

Fluoroquinolones Destroy Collagen

- Animal studies have shown that fluoroquinolones are directly toxic to collagen synthesis and promote collagen degradation.⁴ Fluoride disrupts collagen synthesis, which may be part of the reason that fluoridated pharmaceuticals can damage your muscles, tendons, cartilage, ligaments and other structures.

Sistema nervioso

Resumen

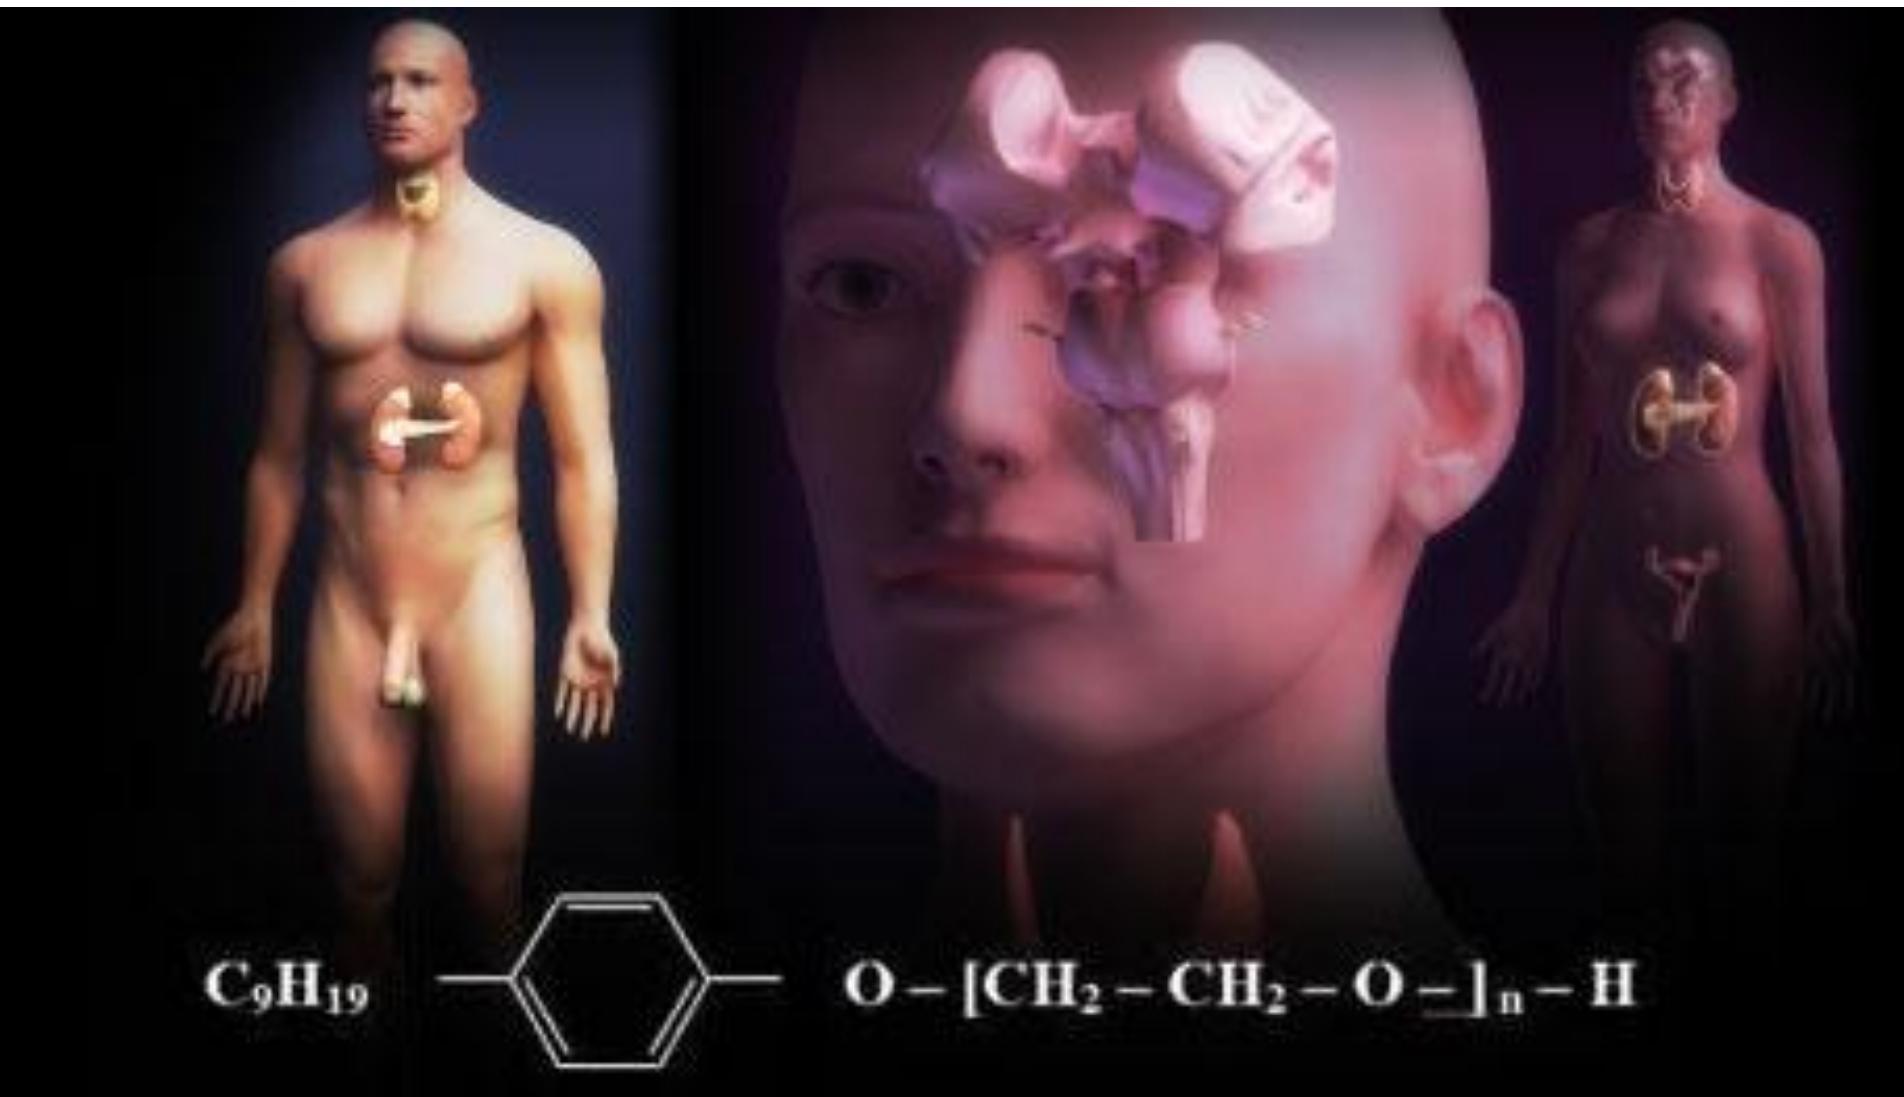

Introducción: El flúor (F) es un elemento tóxico y reactivo; la exposición al mismo pasa casi inadvertida con el consumo de té, pescado de mar, carnes, frutas, etc., y el uso de artículos como aditivo en pastas de dientes, enjuagues bucales, antiadherentes sobre sartenes y hojas de afeitar como el teflón. Asimismo, ha sido utilizado con la intención de reducir la caries dental.

Desarrollo: El F puede acumularse en el organismo y se ha demostrado que la exposición crónica al mismo produce efectos nocivos sobre distintos tejidos del organismo y de manera particular sobre el sistema nervioso, sin producir malformaciones físicas previas.

Fuentes: Diversos trabajos, tanto clínicos como experimentales, han reportado que el F provoca alteraciones sobre la morfología y bioquímica cerebral, que afectan el desarrollo neurológico de los individuos y, por ende, de funciones relacionadas con procesos cognoscitivos, tales como el aprendizaje y la memoria.

Las toxicidad del F se puede presentar a partir de la ingesta de 1 parte por millón (ppm) y los efectos no son inmediatos ya que pueden tardar 20 años o más en manifestarse.

Conclusión: La ingesta prolongada de F provoca daños a la salud y de manera importante sobre el sistema nervioso central, por lo que es importante considerar y evitar el uso de artículos que contengan flúor y de manera particular en individuos en desarrollo, debido a la susceptibilidad que presentan a los efectos tóxicos del F.

XENOESTROGENS HALOGENATION

GENDER-BENDING CHEMICALS

PHTHALATES: Found in vinyl flooring, shower curtains, solvents, plastics, PVC. Banned in cosmetics made in EU.

PARABENS: Preservatives used in cosmetics, creams, lotions and deodorants.

TRICLOSAN: Anti-bacterial chemical used in soaps, toothpaste and chopping boards.

PCBs: Found in electrical circuits, paints, brake linings and flame retardants.
Banned in EU.

BISPHENOL A: Used in clear plastic baby bottles, tin cans, mobile phone casings. Banned in baby bottles in Canada.

LINURON/DIURON: Herbicides used to control weeds on

roads, forests and farms.
Traces found on food.

VINCLOZOLIN: Fungicide banned in EU, but found on imported fruit and vegetables.

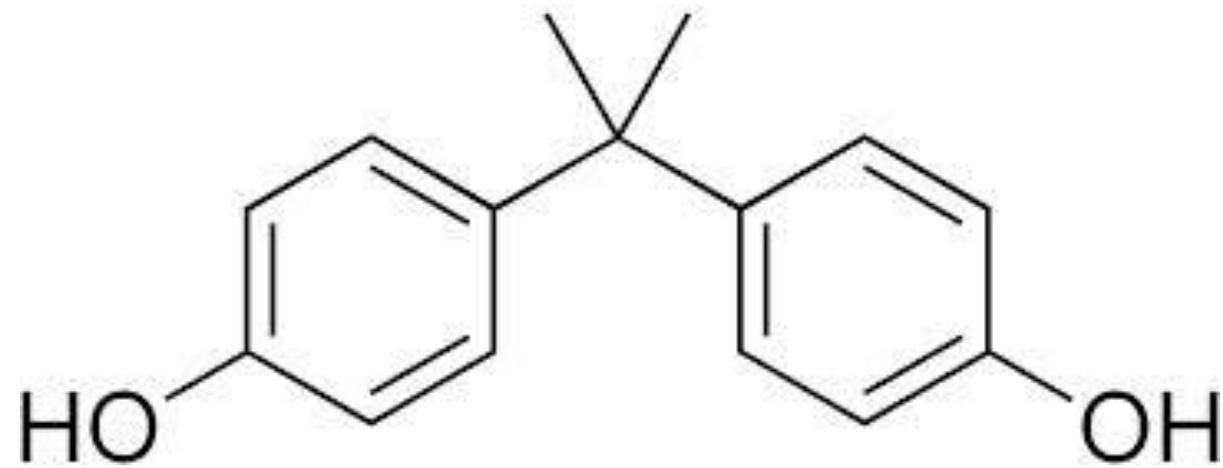

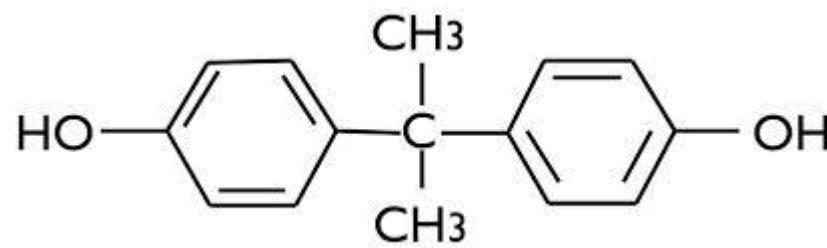

PENTA-BDE: Flame retardants, now banned in EU, found in old foam mattresses and car seats.

PROCHLORAZ: Fungicide used on fruits and vegetables.

PROCYMIDONE: Fungicide banned in EU last year, traces found in UK beans, fruit smoothies and breakfast cereal.

BPA

THE CHEMICALS... AND THEIR EFFECTS

Gender-bending chemicals are part of everyday life and can be found in everything from toiletries to food, the World Health Organisation warns.

PHTHALATES

Used to soften plastics and give cosmetics a silky feel, these are found in children's toys, PVC flooring, shower curtains and credit cards.

Although they are banned from cosmetics made in the EU, they may still be found in make-up produced elsewhere.

Studies have linked them to diabetes, asthma and male reproductive defects that could affect fertility. Campaigners advise choosing natural wooden flooring over PVC, giving children metal or wooden toys and switching plastic shower curtains for glass screens.

Where plastic can't be avoided, more rigid varieties should have lower levels of phthalates than softer versions.

BISPHENOL A

As a building block of many common plastics, it is in a host of everyday items, including cutlery, CD cases and sunglasses. It has recently been banned from baby bottles but can still be found in till receipts and is used to line tin cans.

It has been linked to fertility problems, breast cancer, prostate cancer and heart disease.

BROMINATED FLAME RETARDANTS

Also highlighted in the WHO report, these chemicals are linked to a host of health problems including hyperactivity, learning difficulties, low sperm counts and difficulties in becoming pregnant.

They are used in sofas and other soft furnishings, carpets and rugs and the casings of computers, DVD players and mobile phones, to slow the rate of burning.

Also of concern are PCBs, chemicals linked to liver cancer and male fertility problems. They are banned in the UK but take so long to break down they continue to contaminate soil and food.

Triclosan 1%w/v Pre-Op Wash Liquid Soap

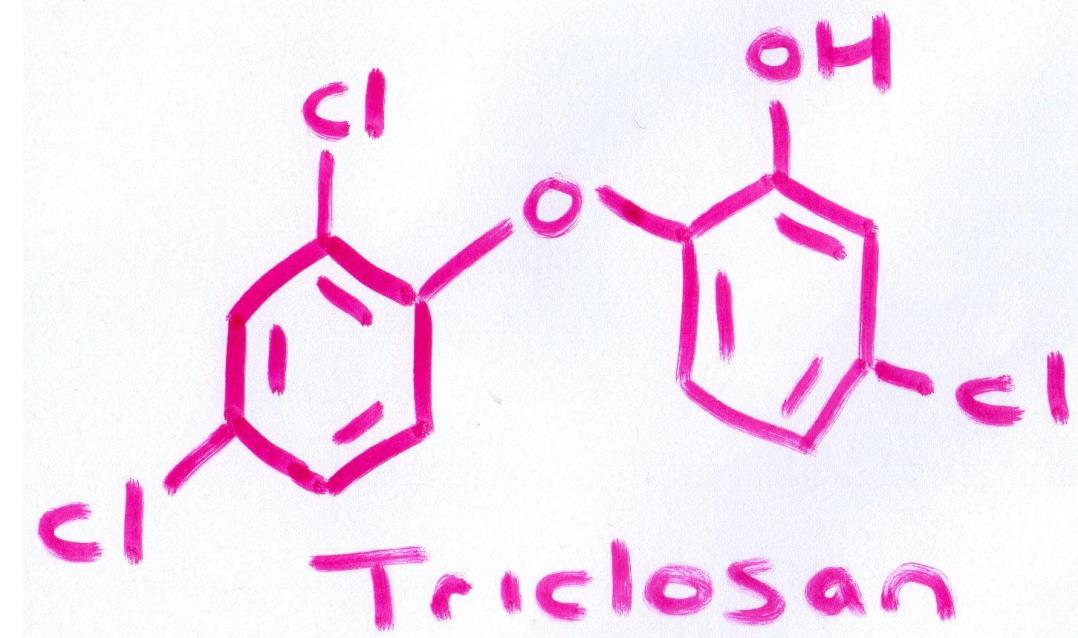

You have been provided with this wash to thoroughly cleanse and disinfect your skin prior to your operation. Triclosan 1%w/v Pre-Op Wash Liquid Soap helps reduce the micro-organisms which live on healthy skin. You should use a clean (new) sponge or flannel to assist you in washing your **WHOLE** body thoroughly. Follow instructions set out below.

- 1** Wet whole face, body and hair in the shower or bath.
- 2** Apply a small amount of Triclosan 1%w/v Pre-Op Wash Liquid Soap to wet hair. Lather well and rinse.
- 3** Apply a small amount of Triclosan 1%w/v Pre-Op Wash Liquid Soap, undiluted, to your face. Pay special attention to the NOSE area. Avoid contact with the eyes (shut lids tightly). Rinse with water.
- 4** Work down to NECK and ARMS. Pay special attention to the UNDERARMS and NAVEL. Using a sponge can assist.
- 5** Now cleanse the GENITAL area, BUTTOCKS and ANAL area with the sponge and foaming wash.
Men: Special attention to penis and beneath the scrotum.
Women: Special attention to the skin folds of the vulva.
- 6** Work down cleansing your THIGHS and LEGS.
- 7** Rinse your entire body.
- 8** Now wash your whole body again working down from the face (NOSE), ARMPITS, NAVEL, GENITAL area, ANAL region and BUTTOCKS especially.
- 9** Rinse your entire body.
- 10** Dry yourself thoroughly with a freshly laundered towel. Freshly laundered clothes should be worn afterwards.

Acupuncture Meridians are the Fascial Planes of the Body

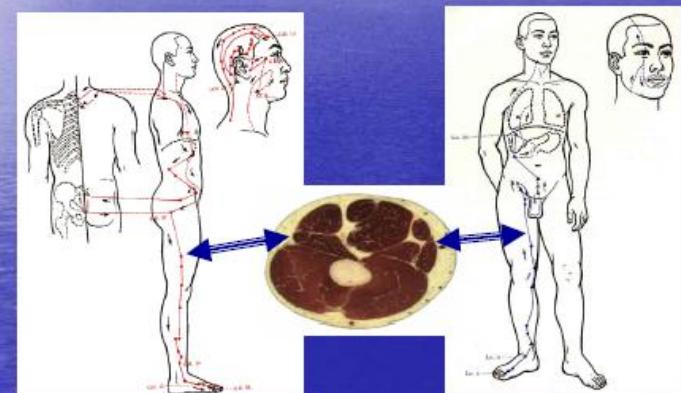

- The Anatomical Record, Volume 269, Issue 6, 2002, pp. 257-265.
Relationship of acupuncture points and meridians to connective tissue planes. Helene M. Langevin,* Jason A. Yandow.
- Acupuncture meridians traditionally are believed to constitute channels connecting the surface of the body to internal organs. We hypothesize that the network of acupuncture points and meridians can be viewed as a representation of the network formed by interstitial connective tissue.
- This hypothesis is supported by ultrasound images showing connective tissue cleavage planes at acupuncture points in normal human subjects. To test this hypothesis, we mapped acupuncture points in serial gross anatomical sections through the human arm.

5

Chronic Illness is Due to Loss of Voltage

- We drink acidic water. Acidic water can't enter cells so most are dehydrated.
- We think various beverages are substitutes for water.
- We use caffeine and alcohol.
- We eat only cooked food. When we eat fresh food, it is usually salad made with iceberg lettuce = like eating newspaper.

Chronic Illness is Due to Loss of Voltage

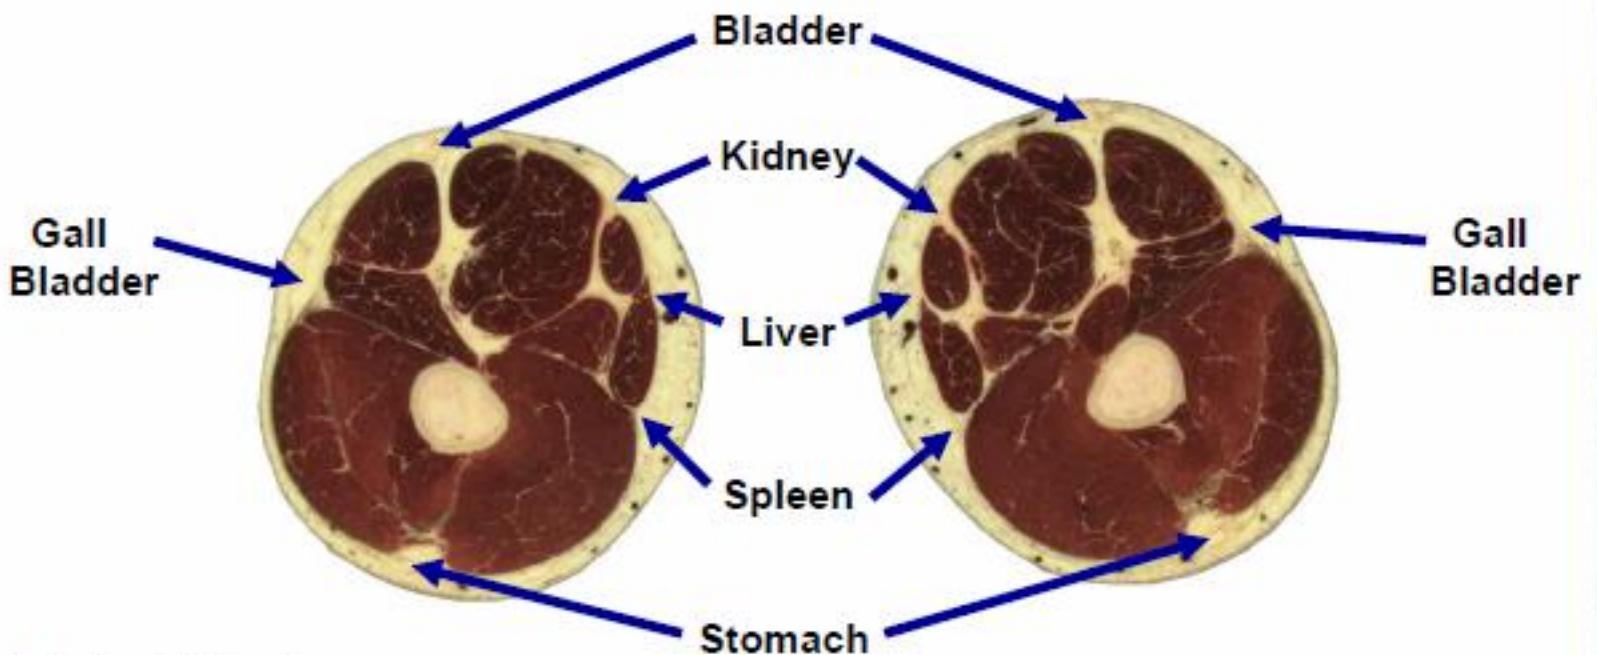

- We rarely get out in the sun. If we do, we use sunblock so we don't get benefits.
- We almost never touch the earth. We wear rubber soles on our shoes and ride in cars with rubber tires.
- We rarely lean against a tree or touch a flower that is growing.

Chronic Illness is Due to Loss of Voltage

- We keep looking for a magic pill when what we need is voltage.
- For organs (capacitors) to store voltage, they must have water and minerals.
- The closest thing to a magic pill is anti-oxidants because they are electron donor that provide electrons to neutralize free radicals. Free radicals are chemicals that are missing an electron and take it from wherever they can find one.

Triclosan 1%w/v Pre-Op Wash Liquid Soap

You have been provided with this wash to thoroughly cleanse and disinfect your skin prior to your operation. Triclosan 1%w/v Pre-Op Wash Liquid Soap helps reduce the micro-organisms which live on healthy skin. You should use a clean (new) sponge or flannel to assist you in washing your **WHOLE** body thoroughly. Follow instructions set out below.

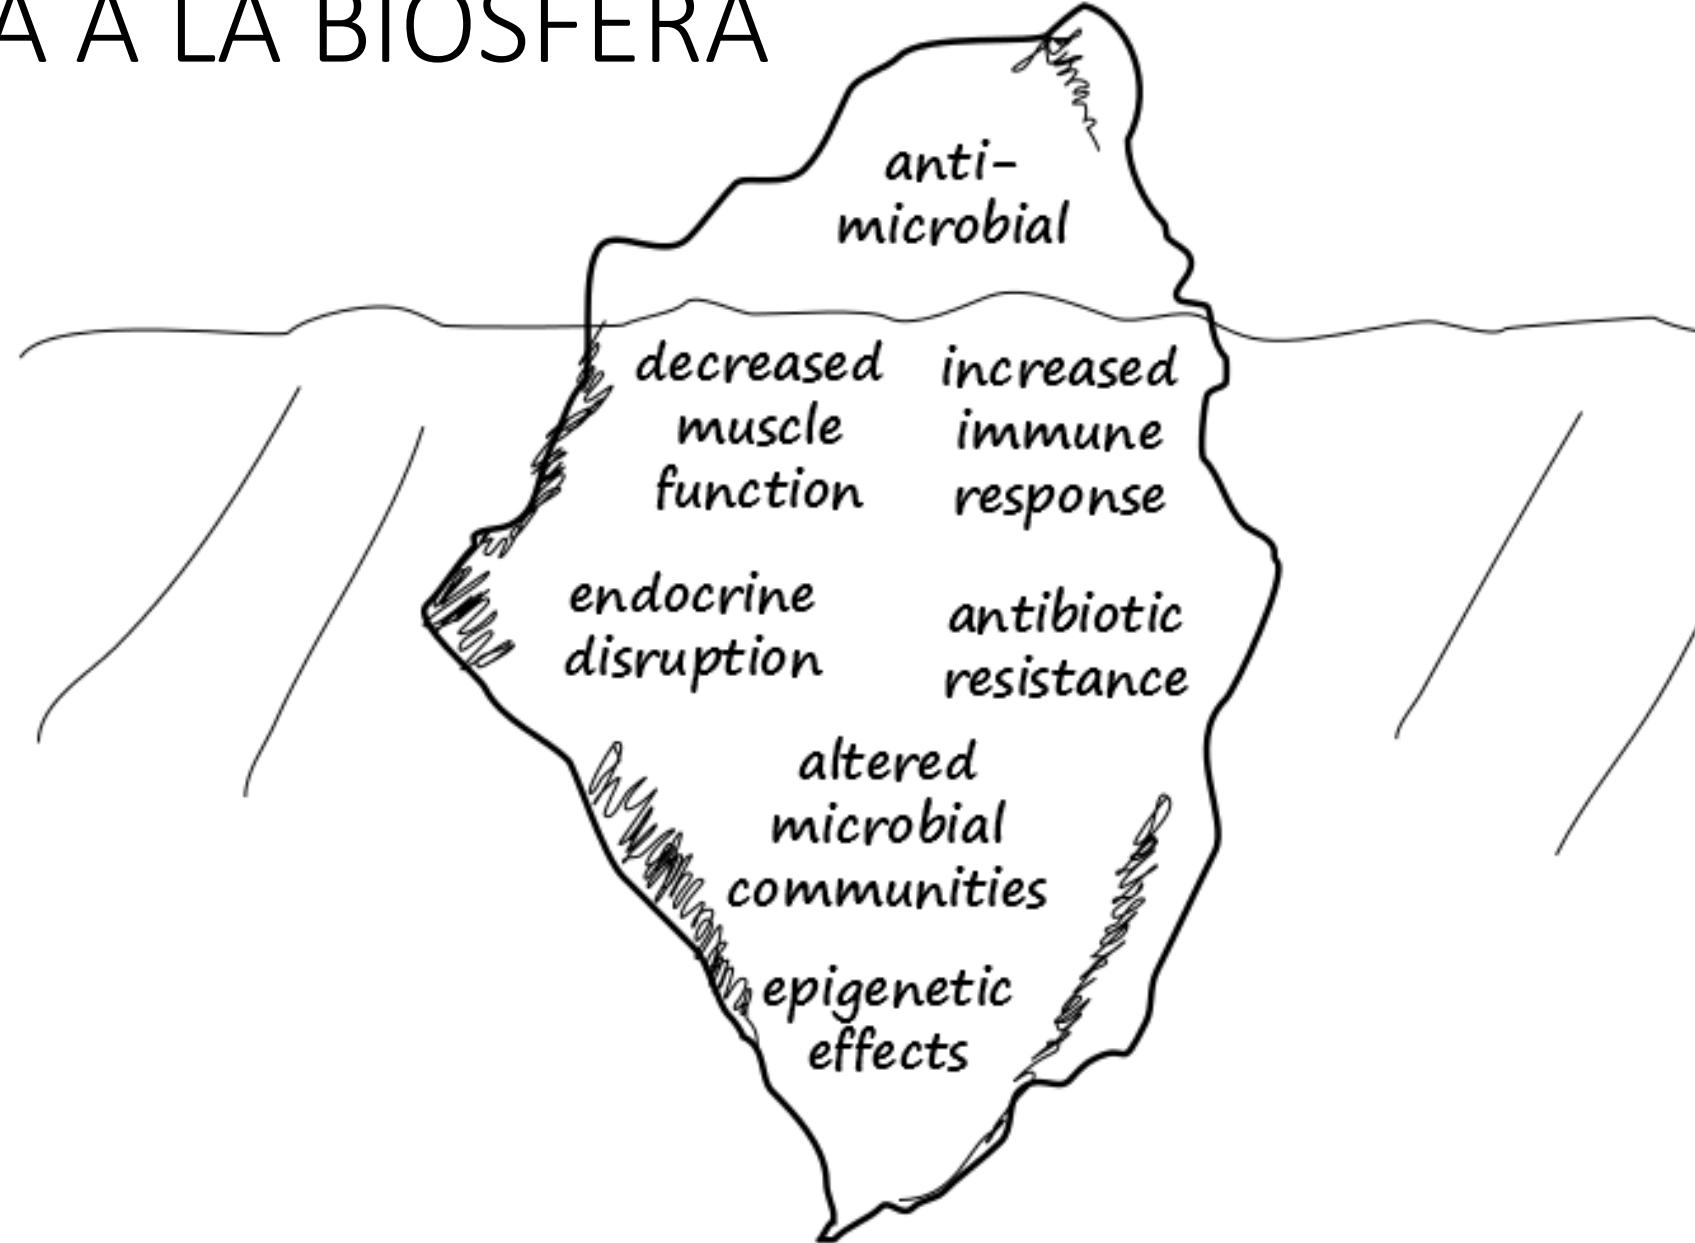

- 1** Wet whole face, body and hair in the shower or bath.
- 2** Apply a small amount of Triclosan 1%w/v Pre-Op Wash Liquid Soap to wet hair. Lather well and rinse.
- 3** Apply a small amount of Triclosan 1%w/v Pre-Op Wash Liquid Soap, undiluted, to your face. Pay special attention to the NOSE area. Avoid contact with the eyes (shut lids tightly). Rinse with water.
- 4** Work down to NECK and ARMS. Pay special attention to the UNDERARMS and NAVEL. Using a sponge can assist.
- 5** Now cleanse the GENITAL area, BUTTOCKS and ANAL area with the sponge and foaming wash.
Men: Special attention to penis and beneath the scrotum.
Women: Special attention to the skin folds of the vulva.
- 6** Work down cleansing your THIGHS and LEGS.
- 7** Rinse your entire body.
- 8** Now wash your whole body again working down from the face (NOSE), ARMPITS, NAVEL, GENITAL area, ANAL region and BUTTOCKS especially.
- 9** Rinse your entire body.
- 10** Dry yourself thoroughly with a freshly laundered towel. Freshly laundered clothes should be worn afterwards.

TRUE FOOD CHAIN

Esquema básico para la determinación de carencias nutricionales

Impedance

Common Ways Electrons are Given to the Human Body

- Alkaline water
- Uncooked food
- Touching the earth
- Sunshine
- Moving water
- Touching another living thing (e.g., people, pets, trees, plants)

Common Ways Electrons are Given to the Human Body

- **Hugs**: electrons transferred from one body to another by the acupuncture meridians.
- **Reflexology**: like hugs only transmitted from hands to acupuncture points.
- **Acupuncture**: needle transfers electrons from therapist and/or air to meridians.
- **Moxibustion**: burning material around acupuncture needle transfers both electrons and infrared light.

Common Ways Electrons are Taken From the Human Body

- Acidic water (tap water, chlorinated water, fluoride, most bottled water)
- Carbonated beverages
- Caffeinated beverages (pop, coffee, tea)
- Alcoholic beverages
- Cooked food
- Processed food

Common Ways Electrons are Taken from the Human Body

- **Healers/doctors** who touch their patients lose electrons to patient.
- **Hugs:** transfers electrons from one person to another.
- **Parent holding sick child:** child gets well quicker and parent left tired.
- **Moving air:** wind, air conditioning, fans, convertibles, hair dryers.

Acupuncture Meridians are the Fascial Planes of the Body

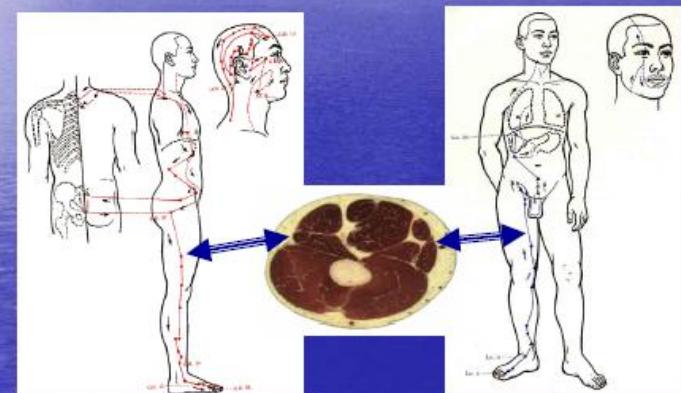

- The Anatomical Record, Volume 269, Issue 6, 2002, pp. 257-265.
Relationship of acupuncture points and meridians to connective tissue planes. Helene M. Langevin,* Jason A. Yandow.
- Acupuncture meridians traditionally are believed to constitute channels connecting the surface of the body to internal organs. We hypothesize that the network of acupuncture points and meridians can be viewed as a representation of the network formed by interstitial connective tissue.
- This hypothesis is supported by ultrasound images showing connective tissue cleavage planes at acupuncture points in normal human subjects. To test this hypothesis, we mapped acupuncture points in serial gross anatomical sections through the human arm.

- Founder / Director of the Dallas Eye Institute

5

Chronic Illness is Due to Loss of Voltage

- We drink acidic water. Acidic water can't enter cells so most are dehydrated.
- We think various beverages are substitutes for water.
- We use caffeine and alcohol.
- We eat only cooked food. When we eat fresh food, it is usually salad made with iceberg lettuce = like eating newspaper.

Chronic Illness is Due to Loss of Voltage

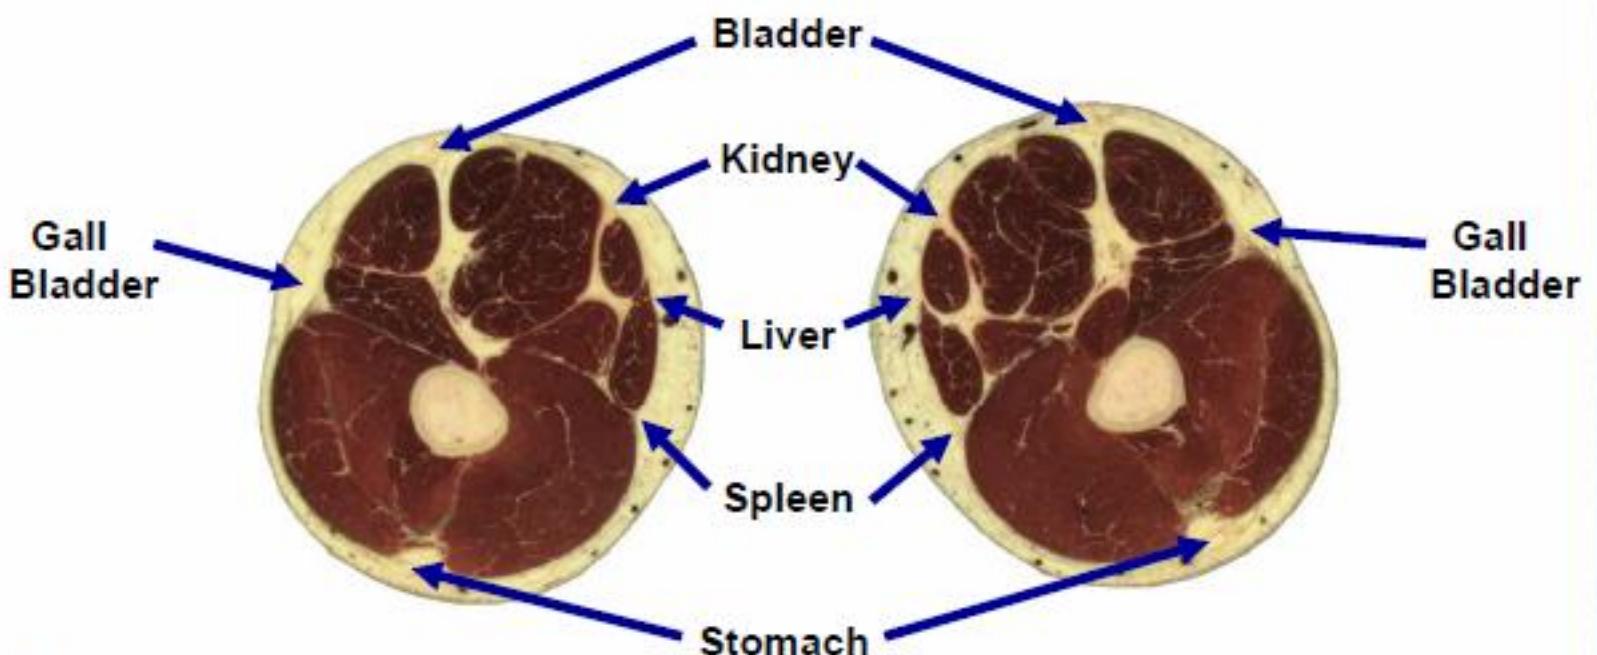

- We rarely get out in the sun. If we do, we use sunblock so we don't get benefits.
- We almost never touch the earth. We wear rubber soles on our shoes and ride in cars with rubber tires.
- We rarely lean against a tree or touch a flower that is growing.

Chronic Illness is Due to Loss of Voltage

- We keep looking for a magic pill when what we need is voltage.
- For organs (capacitors) to store voltage, they must have water and minerals.
- The closest thing to a magic pill is anti-oxidants because they are electron donor that provide electrons to neutralize free radicals. Free radicals are chemicals that are missing an electron and take it from wherever they can find one.

Anterior (front of the body)

How Cells Work

Nutrition Is Required To Keep This Machinery Working

Cell Waste Is Excreted Here And Must Be Removed By Lymph Which Requires Muscle Contraction (Exercise)

Drugs Usually Work Here

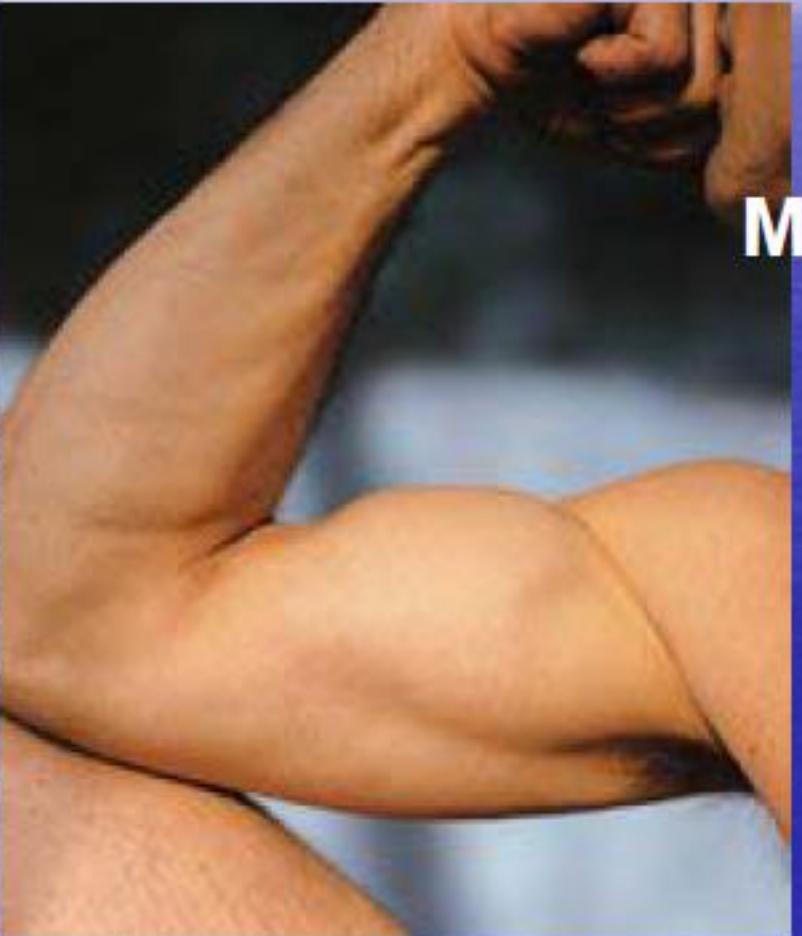

All Of These Functions Require Voltage From Cell Membrane And ATP From Cytoskeleton.

How Cells Work

- The **peripheral cytoskeleton** lies just inside the membrane. It is the fuel storage for the cell. It stores ATP, is a resistor (impedance) that controls cellular electronics and passage of ions into the cytoplasm via structured water layer, and uses electrons from the membrane to maintain the proper flow of current (amperage).
- Cells can function with holes in the membrane, without a membrane, and without a nucleus. They cannot function without a peripheral cytoskeleton.

In the Body, Mineral Pairs Serve to Turn Things Off and On

Muscle Contraction/Relaxation

Calcium

Magnesium

Tissue Biopsy

- Only one percent of minerals in the body are in the blood.
- To find the levels of minerals in the system, one can do a tissue biopsy. The easiest tissue to biopsy is hair.
- By identifying which minerals are deficient, we can know which switches aren't working and why.

How Cells Work

Membrane

1. Electrical System
2. Stores electrons
3. Capacitor (two protein layers separated by a fat layer).

Mitochondria

1. Fuel Production
2. Convert Glucose to Light
3. Light Converts ADP->ATP

Nutrition: Provides Raw Materials for Cell's Work

Peripheral Cytoskeleton

1. Fuel supply
2. Stores ATP in Structured Water
3. Resistor

Nucleus

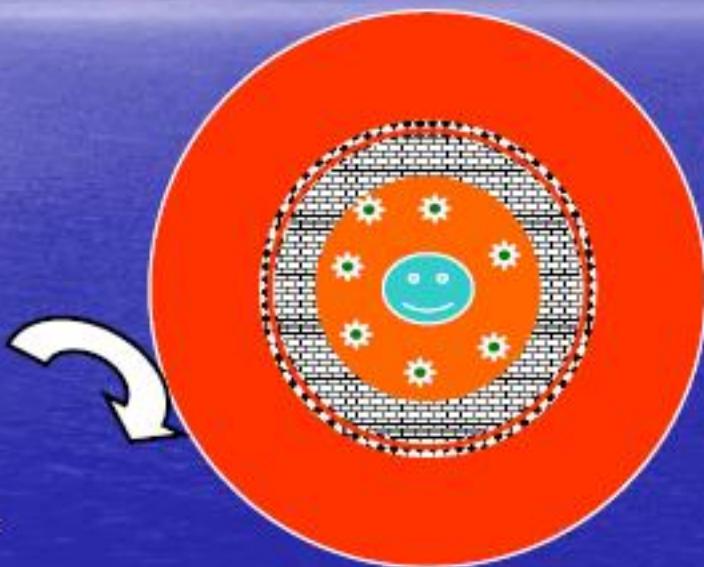

1. Contains DNA
2. Responsible for Reproduction

Cytoplasm

1. Gel Structure
2. Does Work of the Cell
3. Follows Cell Programming
4. Follows Instructions from Regulatory Neuropeptides

Cell Inflammation = Increased Cell Impedance

As Impedance
(Resistance)
Increases, Oxygen
and Nutrients to the
Cell Decreases and
Flow of Electrons
Decreases (Power), =
pH becomes acidic.

Cell Malfunction (Illness) is a Loss of Power to the Cells

- Cell injury (trauma, infection, metabolic) causes swelling with an increase in impedance (resistance).
- Cell membrane (capacitor) provides electrons to try to maintain normal current.
- Cell membrane (capacitor) runs out of electrons (decreased voltage).
- Loss of current to cell results in slowing → stopping of cell function.

New Proof of How We Heal

Healing Items:

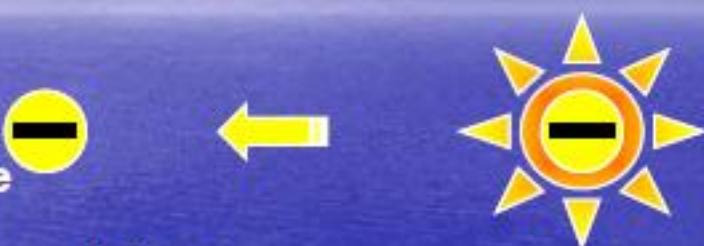

- Neuropeptides (RP)
- RBC
- WBC
- Proteins
- Fats

Injured areas are
electropositive.
That attracts the
things needed to
heal.

Current of Injury Becomes Negative → Chronic Disease

Healing Items:
Repelled by
Negative Charge

Causes of Switch to Electronegativity:

1. Loss of electrons in membranes due to increased impedance from chronic swelling.
2. Bleeding (RBC's are electronegative).
3. Cytoplasm (electronegative) dumped into extracellular fluid as membranes rupture.

How does it affect us?

- DDT found in breast milk
- PCBs, (polychlorinated biphenyls), are mixtures of chemicals and potentially cancer-causing. They build up in fatty tissue
- Damage DNA
- Toxic chemicals and heavy metals get into the brain and nervous tissue

But some of it we can't

- Invisible CFC's from aerosol sprays put a hole in the protective ozone layer.
- Out gassing from chemicals used in paints, cleaners, solvents and fuels may contribute to health problems in some people.

Sistema nervioso

Resumen

Introducción: El flúor (F) es un elemento tóxico y reactivo; la exposición al mismo pasa casi inadvertida con el consumo de té, pescado de mar, carnes, frutas, etc., y el uso de artículos como aditivo en pastas de dientes, enjuagues bucales, antiadherentes sobre sartenes y hojas de afeitar como el teflón. Asimismo, ha sido utilizado con la intención de reducir la caries dental.

Desarrollo: El F puede acumularse en el organismo y se ha demostrado que la exposición crónica al mismo produce efectos nocivos sobre distintos tejidos del organismo y de manera particular sobre el sistema nervioso, sin producir malformaciones físicas previas.

Fuentes: Diversos trabajos, tanto clínicos como experimentales, han reportado que el F provoca alteraciones sobre la morfología y bioquímica cerebral, que afectan el desarrollo neurológico de los individuos y, por ende, de funciones relacionadas con procesos cognoscitivos, tales como el aprendizaje y la memoria.

Las toxicidad del F se puede presentar a partir de la ingesta de 1 parte por millón (ppm) y los efectos no son inmediatos ya que pueden tardar 20 años o más en manifestarse.

Conclusión: La ingesta prolongada de F provoca daños a la salud y de manera importante sobre el sistema nervioso central, por lo que es importante considerar y evitar el uso de artículos que contengan flúor y de manera particular en individuos en desarrollo, debido a la susceptibilidad que presentan a los efectos tóxicos del F.

A diferencia de los demás halógenos, el Flúor no puede formar iones de coordinación con el oxígeno, debido a su propiedad de desplazar al oxígeno de cualquier compuesto

Título: Factibilidad económica de un Programa de fluoración de la sal de consumo humano para la prevención de la carie dental en el Ecuador: Evaluación de los costos y beneficios anticipados.

Fonte: Quito; OPS; 1994. 15 p.

Idioma: Es.

Resumo: En este trabajo se utilizó como metodología estimar los costos y beneficios anticipados, durante un período de cinco años. Después de realizados los estudios se llegó a la conclusión que el beneficio económico del programa de fluoración de la sal para la prevención de las caries dentales es extremadamente alto. Por lo tanto su implementación se considera necesaria y factible

MURDER BY INJECTION

**The Story of the Medical
Conspiracy
Against America**

by
Eustace Mullins

nization. Mr. Higgins spent \$25,000 in gathering data from England and other countries, much of which he incorporated into his book, The Horrors of Vaccination Exposed. He challenged the N.Y. State and City Health Departments to disprove his claim that 'there had been more deaths from vaccination than from smallpox in New York every year for the past 15 years.' His challenge was never accepted."

Chapter 5 THE FLUORIDATION CONSPIRACY
The following is quoted from the American Mercury Magazine of November 1959, page 134.

Here is an unforgettable statement on the effects of fluoride on the human brain. It is from one of the nation's foremost industrial chemist; Charles Eliot Perkins, who was sent by the United States Government to help take charge of the giant I.G. Farben chemical plants in Germany at the end of World War II. The statement is taken from a letter which Mr. Perkins wrote the Lee Foundation for Nutritional Research, Milwaukee 3, Wisconsin, October 2, 1954. To wit:The German Chemists worked out a very ingenious and far-reaching plan of mass control which was submitted to and adopted by the German General Staff. This plan was to control the population in any given area through mass medication of drinking water supplies.....In this scheme of mass control, 'sodium fluoride' occupied a prominent place.....However, and I want to make this very definite and very positive-the real reason behind water fluoridation is NOT TO BENEFIT CHILDREN'S TEETH... THE REAL PURPOSE BEHIND WATER FLUORIDATION IS TO REDUCE THE RESISTANCE OF THE MASSES TO DOMINATION AND CONTROL AND

SONRIE
CALLA
Y
OBEDECE

LOSS OF LIBERTY..... Repeated doses of infinitesimal amounts of fluorine will in time gradually reduce the individual's power to resist domination by slowly poisoning and narcotizing this area of brain tissue, and make him submissive to the will of those who wish to govern him..... I was told of this entire scheme by a German chemist who was an official of the great Farben chemical industries and was prominent in the Nazi movement at the time.....I say this with all the earnestness and sincerity of a scientist who has spent nearly 20 years research into the chemistry, biochemistry, physiology and pathology of "FLUORINE"ANY PERSON WHO DRINKS ARTIFICIALLY FLUORIDATED WATER FOR A PERIOD OF ONE YEAR OR MORE WILL NEVER AGAIN BE THE SAME PERSON, MENTALLY OR PHYSICALLY."

U.S. Government is always spouting off about other nations violating HUMAN RIGHTS involving GENOCIDE, LOBOTOMY and other methods, some would call SLOWLY POISONING the populace, with non-clinically tested "Industrial Fluoride" murder or perhaps deliberate manslaughter, but forced "Euthanasia" or "Genocide" more accurately describes the action of the United States Public Health Service. An indisputable fact!

Chapter Five THE FLUORIDATION CONSPIRACY Reference to Page 154.

Congressman A. L. Miller of Nebraska is quoted in the Congressional Record March 24, 1952, A1833, "I was misled by the Public Health Service.I was misled and perhaps

1. Hipotiroidismo oculto
2. Distiroidismo, continuum graves, hashimoto
3. **No bocio, no TSH**
4. Algunos autores sugieren que hasta el 80/100 de americanos tienen hipotiroidismo no diagnosticable
5. Esta epidemia-pandemia podría ser la factor de mayor impacto en la salud mental y física del siglo
6. Es fácil y barato de tratar
7. La factor mas importante es el uso masivo de **flúor industrial** de SAL, AGUA, MEDICINAS Y COSMETICOS

Resultados de la infiltración
tisular de Mucina

Mixedema y perfil epidemiológico

1. mucina dificulta el flujo sanguíneo a través de los tejidos. El cuerpo incrementa la presión para forzar la sangre a través del tejido. A esto le denominan **hipertensión esencial**
2. Mucina rodea las membranas celulares limitando el acceso a los receptores celulares de insulina = insulino resistencia = **diabetes tipo II**
3. Mucina se deposita en los órganos del abdomen y en el omentum, resulta «barriga cervecera» **obesidad**
4. Hipotiroidismo y disglucemia tiene a la población cansada y agresiva. **Fatiga crónica, abstinencia de azúcar, adicción a estimulantes, alcoholismo**

Resultados de la infiltración
tisular de Mucina

ADICCION A ESTIMULANTES CAFEINA, AZÚCAR, TAURINA

Mucina, GAG's, myxedema, matrix

- se deposita en los tejidos de los pacientes hipotiroideos, inclusive en la tiroides
- Se confunde con grasa en el síndrome metabólico x
- Explica fisiopatológicamente el síndrome x y la resistencia a la tirosina
- Ligamentos duros inflexibles
- Hashimoto y Graves comparten 2 cosas: mucina y autoinmunidad

Mucina, GAG's, myxedema, matrix

- Las personas con hipotiroidismo tienen una combinación de mucina y grasa en sus tejidos
- El signo del pellizco en el deltoides lo identifica
- Explica fisiopatológicamente el parte del síndrome x y la resistencia a la tirosina

REGULADOR DE LA DISBIOSIS Y DE LOS ENDOBIONTES EXTRACELULARES

LOS MICRORGANISMOS NO PUEDEN GENERAR RESISTENCIA AL YODO

“Medical Science” on Iodine: Then and Now

Now

- A thyroid-centered *consensus* recommending 150 µg/day iodine allowance and not to exceed 300 µg/day
- Without evidence, endocrinologists decree that >1 mg is potentially harmful
- Allopathic physicians ignore studies that show iodine in milligram doses cures fibrocystic disease of the breast

Then

1779: The Coventry Remedy used to treat goiter revealed to be burnt sea sponge

1811: Iodine discovered (Bernard Courtois)

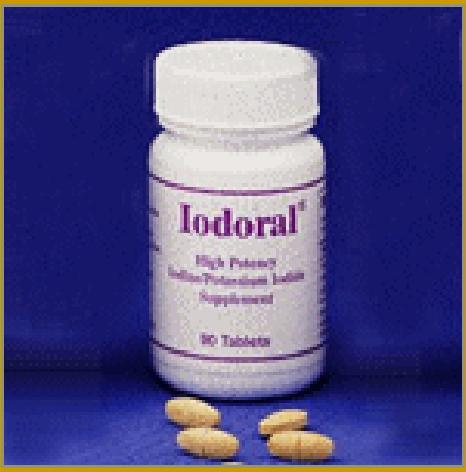

1816: Sea sponge found to contain high quantities of iodine (Andrew Fyfe)

1819: Tincture of Iodine alone shown to shrink goiter (Jean Coindet)

The Truth on Iodine

Dose-Related Benefits

The Safe and Effective Implementation of Orthoiodosupplementation In Medical Practice

by Guy E. Abraham, MD

I. Introduction

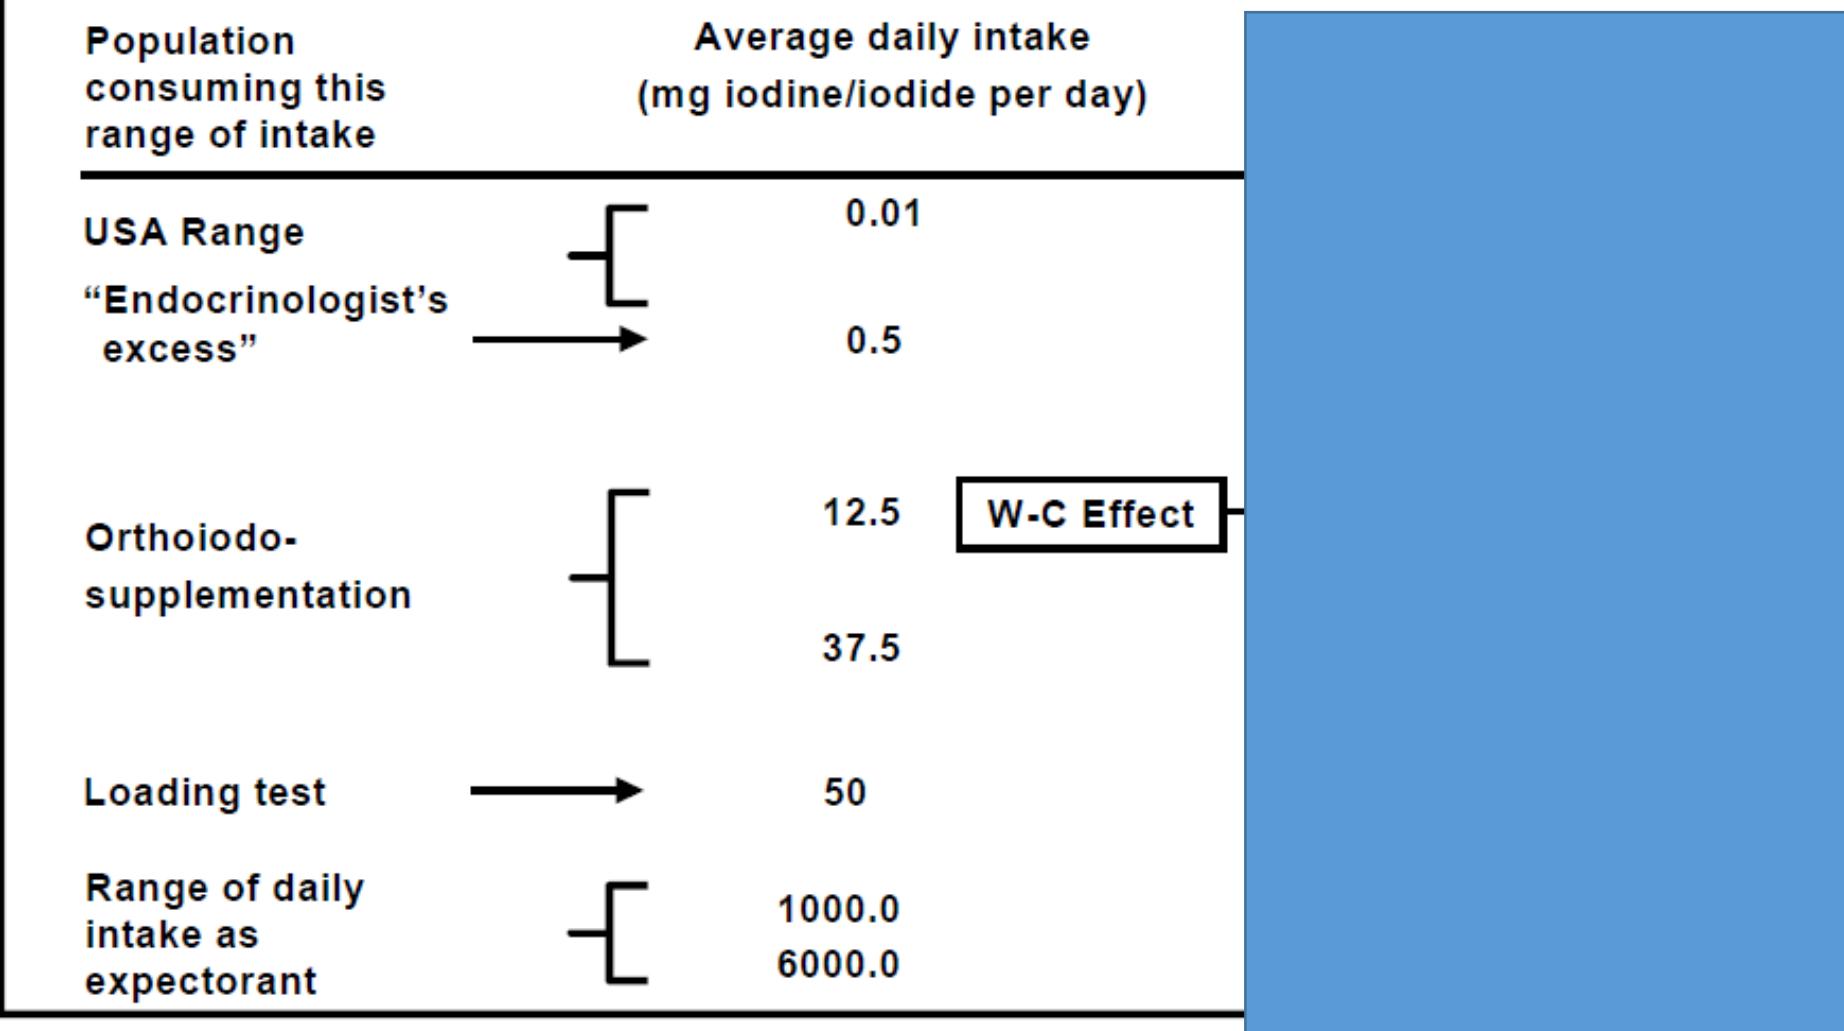

Of all the elements known so far to be essential for health, iodine is the most misunderstood and the most feared. Yet, it is by far the safest of all the trace elements known to be essential for human health. It is the only trace element that can be ingested safely in amounts up to 100,000 times the RDA. For example, potassium iodide has been prescribed safely to pulmonary patients in daily amounts of up to 6.0 gm/day, in large groups of such patients for several years.^{1,3} It is important, however, to emphasize that this safety record only applies to inorganic, non-radioactive iodine/iodide, not to organic iodine-containing drugs and to radioiodides. Unfortunately, the severe side effects of iodine-containing drugs have been attributed to inorganic iodine/iodide, even though published studies clearly demonstrate that it is

Medicoiodophobes suffer from: A) a split personality which results in iodophobia within the orthoiodosupplementation range previously used safely and successfully in medical practice and iodophylia for megadoses of iodide (up to 12gm/day); B) double standards, which render those physicians intolerant to the minor side effects of the inorganic forms and extremely tolerant to the severe side effects of the radioactive and organic forms; C) amnesia pertaining to the inorganic, non-radioactive forms when making therapeutic decisions; D) confusion, attributing the severe side effects of organic iodine-containing drugs to inorganic iodine/iodide; and E) an altered state of consciousness, allowing doublethink, doublespeak, and contradictory logic to become acceptable. Although the factors involved in medical iodophobia are still unknown, decreased cognition seems involved. Since low iodine intake is associated with intellectual impairment, deficiency of this essential element cannot be ruled out, and if present, would create a self-perpetuating phenomenon. Needless to say, medical iodophobia is contagious and can be transmitted to patients and other physicians (iatrogenic iodophobia). Medical iodophobia will remain a syndrome until the causes are discovered and effective therapy implemented. It is very likely however, that medical iodophobia will eventually be classified as an iodine-deficiency disease.

Discovered in Imperial France⁵ a century before the con-

EXCITOTOXICITY: A POSSIBLE CENTRAL MECHANISM IN FLUORIDE NEUROTOXICITY

Russell L Blaylock^a

Ridgeland, MS, USA

SUMMARY: Recent evidence indicates that fluoride produces neuronal destruction and synaptic injury by a mechanism that involves free radical production and lipid peroxidation. For a number of pathological disorders of the central nervous system (CNS), excitotoxicity plays a critical role. Various studies have shown that many of the neurotoxic metals, such as mercury, lead, aluminum, and iron also injure neural elements in the CNS by an excitotoxic mechanism. Free radical generation and lipid peroxidation, especially in the face of hypomagnesemia and low neuronal energy production, also magnify excitotoxic sensitivity of neurons and their elements. This paper reviews briefly some of the studies that point to a common mechanism for the CNS neurotoxic effects of fluoride and calls for research directed toward further elucidation of this mechanism.

Keywords: Aspartate; Excitotoxicity; Fluoride neurotoxicity; Fluoroaluminum complexes;

FLUOR Y HALOGENOS

- FLUORAPATITA Y ALUMINIO
- INSETICIDAS
- VENENO RATAS
- ANESTESICOS,
- AGUA CLORADA
- TRICLOSAN
- CLORHEXIDINA
- DENTIFRICOS, FLUOROQUINOLONAS
- TTO ODONTOLOGICO
- ANTIBIOTICOS
- CLOROFLUORO CARBONOS CFC Y OZONO
- AGENTE NARANJA
- PEDITOPOLIVIFLUOR

FLUOR

- Corrosivo
- Veneno de ratas
- Diluye el vidrio y el metal
- Diluye los huesos
- Acaba con la tiroides
- Desplaza al yodo
- Actua como TSH
- Fluoro tirosina, hormona Impostora

CLORO

- DDT
- AGENTE NARANJA
- TRIHALOMETANOS
- TRICLOSAN
- CLOROFLUOROCARBONOS
- DIOXINAS
- PVC

OBEDIENCIA ENDEMICA

- SUBCRETINISMO ENDÉMICO
- ANESTECIA ENDEMICA

- MULTIPLES SINTOMAS EN UNA SOLA GLANDULA...
- COMO LOGRAR QUE LA GENTE SEA HIPOTIROIDEA Y QUE NO RECIBA TRATAMIENTO.
- HIPOTIROIDISMO OCULTO, INDIAGNOSTICABLE

DENTIFRICO

- VASODILATA CON MENTOL
- MICROABRASION DEL CEPILLADO
- EXCESO DE PASTA Y ANGUAJE
- 3/4/5 VECES AL DÍA
- ENCIAS SE CONECTAN CON TODOS LOS CANALES CONECTIVOS Y SUBLINGUA ABSORBE SIN METABOLISMO DEL PRIMER PASO, LAS VENAS MAXILARES DRENAN AL SENO VENOSO DIRECTO AL CEREBRO SIN PASO POR EL HIGADO
- ZONAS SIN BBB SON LAS MÁS AFECTADAS

Two Leading Brand Canadian Toothpaste Warnings

Communities that have stopped or rejected fluoridation in 2012

**26 communities over
780,000 people**

Communities that have stopped or rejected fluoridation in 2013

**45 communities over
1,600,000 people**

2. April 2013, Israel MOH
announces lifting of
mandatory requirement in
one year

afectan a la tiroides: Sal fluorada, Soya, leche, harina y pan. Sal y/o agua con Flúor y cloro.

- 1. Consumir únicamente sal marina (sal en grano sin flúor) y no consumir sal de mesa con flúor, ni agua fluorada
- 2. Baños de tina semanales 1 o 2 veces por semana con 2 kilos de sal marina y 1 libra de sulfato de magnesio.
- 3. Durante 3 meses No consumir nada de pan, ningún pan, ni galletas ni productos derivados de harina sobre todo de trigo. Dieta libre de gluten.

- 4. Consumir algas marinas, algas de sushi (solo las algas), kelp, chlorella, espirulina. Fuentes de yodo.
- 6. Tomar cloruro de magnesio 50 ml 7am y 50 ml 5 pm. Solución de 33g en 1500ml.
- 7. Tomar suplementos y alimentos ricos de calcio, magnesio, yodo y zinc.
- 8. Sauna seco con ejercicio semanal por 15 min.
- 9. Aplicar aceite de ricino con una o dos gotas de solución de lugol al 5 %.
