Lecture Title:

Frequency Medicine & Interdimensional Health: The role of body fluid dynamics and cell communication

Abstract:

“The physical body is precipitated out of the fluid body, informed by a field of consciousness that surrounds the body”.

The concept of an Interdimensional model of Health and Wellbeing will be explored. This presentation will give an overview of concepts that relate to the importance of free flowing information in the cellular matrix of the body.

Frequency medicine is becoming more and more accepted in the mainstream narrative as it relates to Health and Wellbeing. We will discuss the nature of the Light Body (Human Energy Field), the Chakra System and the connection into the physical body via the Meridian System. The remedies that are used to restore balance, whether homeopathic or otherwise are carriers of information by means of frequency and resonance. All of this will be explored.

The common thread, and the means by which this flow of information works in the body, is governed by the fluids in the body. It is therefore obvious that water, in it's various states of being (phases), is pivotal in this new and emerging science of Frontier Medicine.
